# Clear, reliable and fade-resistant

## Philips medical recording paper

Protect your equipment investment, your records and your trace recording quality with Philips medical recording paper.

Designed and validated specifically for use with Philips patient monitors, defibrillators, and cardiographs, Philips medical recording paper is manufactured to exacting standards. The result is clear trace recordings that have exceptional archivability, without the premature fading you might experience with other papers.

In fact, recordings on our chemical/thermal paper for our fetal monitors, bedside monitors and defibrillators can last as long as five years, and Philips provides a 30 year warranty on our PTP brand anti-fade paper when used with specific models of Philips cardiographs.

In addition to providing excellent trace quality and fade-resistance, the unique chemical makeup of Philips medical recording paper avoids build-up on print heads, which decreases the threat of damage, helps to prevent paper jams that can disrupt your workflow, and increases the time between print head cleaning. Philips paper also has special markings that make it easy to line up the paper.

We're so confident in the excellence of our paper that some Philips monitor, defibrillator, and cardiograph warranties are voided if print head damage is caused by use of a competitive paper. To receive the quality, reliability and performance you expect from Philips, use Philips medical recording paper.
