

PHILIPS

IntraSight

Interventional
applications platform

Service

Superior service. Secure coverage.

Maximize your image guided therapy investment

IntraSight is a secure, applications based platform that unites proven, best-in-class physiology, imaging, and co-registration¹ tools on a single platform. It is the first interventional platform to run on Microsoft Windows 10, providing the latest data encryption and protection against cybersecurity threats.

With IntraSight, we now offer three new service programs to choose from – Performance Assurance, Full Care and Technology Maximizer. The IntraSight platform enables Philips Remote Services (PRS), a remote diagnostics tool already offered with other Philips systems. This capability improves remote troubleshooting and corrective action planning, ultimately improving uptime. Our new Technology Maximizer³ service program provides ongoing software and hardware upgrades to keep your system state of the art. Keep your system the most secure with Full Care and Technology Maximizer.

IntraSight service program options

Service programs	Planned maintenance	Parts and labor	Upgrades
Performance Assurance Keep compliant with CMS and Joint Commission	●		
Full Care Gain peace of mind for your system	●	●	
Full Care and Technology Maximizer Maximize your investment	●	●	●

A great service experience starts here

Performance Assurance

Compliance with CMS guidelines²

CMS guidelines require “imaging and radiologic equipment whether used for diagnostic or therapeutic purposes must be maintained per manufacturer’s recommendations.” Our service contracts include Philips’ recommended annual planned maintenance procedure.

Full Care

Peace of mind for your system

With Philips Full Care service contract, the entire system is covered, including all cables and optional components, (e.g PIM, PIMr, BUB, etc.). By purchasing a service contract you have an expense you can budget, protecting you against unforeseen costs.

Full Care and Technology Maximizer

Maximize your investment

Your IntraSight is full of new performance advances from the first case. You can keep upgrading it over its useful life with Technology Maximizer for a reasonable, predictable fee.

For five years after installation, we will deliver a minimum of three major upgrades (two software, one hardware). Purchasing these upgrades individually could cost up to twice as much as the image guided therapy Technology Maximizer agreement alone.

Please see your Philips sales representative for more information.

1. Co-registration tools available within IntraSight 7 configuration via SyncVision.
2. Governed by 42 CFR 482.26 (b)(2) CMS Reference: S&C: 14-07-Hospitals
3. Technology Maximizer can be purchased separately from other service agreements.
