For your child's safety and health WARNING!

- Always use this product with adult supervision. After opening, immediately dispose of the product or store it in a place out of babies' reach.
- Never use feeding teats as a soother.
- Continuous and prolonged sipping of fluids will cause tooth decay.
- Always check food temperature before feeding.
- Do not warm contents in a microwave oven, as this may cause uneven heating and could scald your baby.
- If you shake the bottle up and down when you mix the milk in

the bottle, the liquids in the bottle may spout out. Take extra caution to avoid scald burns.

- Keep all components not in use out of the reach of children.
- Do not allow children to play with small parts or walk/run while using bottles or cups.
- Do not place in a heated oven.
- To avoid scald burns, allow hot liquids to cool before preparing the feeds.
- Drinks other than milk and water, such as fruit juices and flavoured sugary drinks are not recommended. If they are used, they should be well diluted and only used for limited periods, not constantly sipped.
- To ensure the bottle functions correctly and to prevent leakage,

always make sure you: remove any debris or residue that may collect around the rim of the bottle before assembly, and avoid over-tightening the bottle screw ring when assembling it onto the bottle.

- Expressed breast milk can be stored in sterilised Philips AVENT bottles/containers in the refrigerator for up to 48 hours (not in the door).
- Check the bottle before each use to ensure all components are attached correctly. If you discover any damage, cracks or broken pieces on the bottles, stop using immediately. Glass bottles are fragile and should be used with care - do not let the baby use the bottle unaided.

- The bottles may break when they fall on the ground or hit other objects. You may get hurt by the cracks or glass fragments.
- When the glass bottle is wet, handle with extra care to avoid slippage.
- When the surrounding temperature or the temperature of the glass bottle is low, do not immerse the bottle directly into boiling water to prevent cracks to the bottle.
- To avoid cracks, never use iced water to cool the glass bottle. Instead, use running water to cool the bottle, or immerse the bottle in a basin containing an appropriate amount of cold water.
- The glass bottle will remain hot following sterilization. To prevent

burns, use the bottle tong to take the bottle or wait until cooling down.

- Do not place the glass bottle in the freezer.
- Plastic material properties may be affected by sterilising and high temperatures. This can affect the fit of the cap.
- Glass bottles may break. Do not use metal inside the bottle to stir contents or for cleaning. This can damage the glass on the inside of the bottle.
