For your child's safety

WARNING! Inspect carefully before each use. Pull the soother in all directions. Throw away at the first signs of damage or weakness. Only use dedicated soother holders tested to EN 12586. Never attach other ribbons or cords to a soother, your child may be strangled by them. Do not store a soother in direct sunlight or near a source of heat, or store in disinfectant ('sterilising solution') for longer than recommended, as this may weaken the teat. Keep the removable teat protector away from children to avoid suffocation. **Before first use**, place in boiling water for 5 minutes, allow to cool, and squeeze out any trapped water from the soother. This is to ensure hygiene. **Clean before each use.** Never dip teat in sweet substances or medication, your child may get tooth decay. Replace the soother after 4 weeks of use, for safety and hygiene reasons. In the event the soother becomes lodged in the mouth, **DO NOT PANIC**, it cannot be swallowed and is designed to cope with such an event. Remove from the mouth with care, as gently as possible. Always use this product under adult supervision. Keep it in a dry covered container. Soothers and caps are suitable for all commonly used forms of sterilization.

Wash your hands thoroughly and ensure surfaces are clean before contact with sterilised components. Night time soothers – expose handles to light before use. The soother can be cleaned by washing with warm water. **DO NOT** use abrasive cleaning agents or anti-bacterial cleaners on the soothers. Excessive combinations of detergents may eventually cause plastic components to crack. Should this occur, replace your soother immediately. **DO NOT** sterilise the display case. If you need information or support, please visit the Philips website at www.philips.com/support.

EN For your child's safety and health WARNING!

- Always use this product with adult supervision.
- Never use feeding teats as a soother.
- Continuous and prolonged sipping of fluids will cause tooth decay.
- Always check food temperature before feeding.
- Heating in a microwave oven may produce localised high temperatures. Take extra care when you heat up drinks in a microwave.
- Keep all components not in use out of the reach of children.
- Do not allow children to play with small parts or walk/run while using bottles or cups.
- Do not place in a heated oven.
- To avoid scalding, allow hot liquids to cool before preparing the feeds.
- Drinks other than milk and water, such as fruit juices and flavoured sugary drinks are not recommended. If they are used, they should be well diluted and only used for limited periods, not constantly sipped.
- To ensure the bottle functions correctly and to prevent leakage, always make sure you: remove any debris or residue that may collect around the rim of the bottle before assembly, and avoid over-tightening the bottle screw ring when assembling it onto the bottle.
- Expressed breast milk can be stored in sterilised Philips AVENT polypropylene bottles/containers in the refrigerator for up to 48 hours (not in the door) or the freezer for up to 3 months. Never refreeze breast milk or add fresh breast milk to already frozen milk.

Before first use

- Clean and sterilise the product.
- Place in boiling water for 5 minutes. This is to ensure hygiene.

Clean before each use

- Wash and rinse thoroughly, then sterilise using a Philips AVENT steriliser or boil for 5 minutes.
- Wash your hands thoroughly and ensure surfaces are clean before contact with sterilised components. Do not place components directly on surfaces that have been cleaned with antibacterial cleaning agents. Excessive concentration of cleaning agents may eventually cause plastic components to crack. Should this occur, replace immediately.
- Dishwasher safe – food colourings may discolour components.

Teats

- Inspect before each use and pull the feeding teat in all directions. Throw away at the first signs of damage or weakness.
- Make sure you use a teat with the correct flow rate when you feed your baby.
- For hygiene reasons, we recommend replacing teats after 3 months.
- Keep teats in a dry and covered container.
- Do not store a feeding teat in direct sunlight or heat, or leave in disinfectant (sterilising solution) for longer than recommended, as this may weaken the teat.
- Teats available in newborn, slow, medium, fast and variable flow rates. Only use Classic+ teats with Classic or Classic+ bottles.
- To buy accessories or spare parts, visit www.shop.philips.com/service or go to your Philips dealer. You can also contact the Philips Consumer Care Centre in your country.
