- Professional whitening results with little to no sensitivity

10 minutes in the chair, 4 shades whiter

- How Zoom QuickPro works
- Kick-start your brighter smile

What to expect

- Consultation and treatment
- Post treatment

Highlights

Two-layer technology

The secret to Philips Zoom QuickPro is a breakthrough two-layer technology. A whitening varnish is applied, followed by an innovative sealant layer that dries in seconds and locks the varnish layer into place. You leave your appointment with the invisible whitening varnish still on and simply brush or wipe off 30 minutes later, revealing a more radiant smile.

Little to no sensitivity

Philips Zoom QuickPro's sealant layer keeps the whitening varnish from getting onto your gums, while the unique formula leads to little to no sensitivity. Not only is QuickPro fast, it's a safe and comfortable experience as well.

How Zoom QuickPro works

Learn more about the Philips Zoom QuickPro procedure by watching this short video.

Kick-start your brighter smile

Philips Zoom QuickPro accelerates your take-home treatment for exceptional results in just a few days. It's the perfect kickstart to a Philips Zoom DayWhite or NiteWhite take-home treatment.

Consultation and treatment

Philips Zoom QuickPro can be applied the same day as your appointment, after a full cleaning or polish. Your dental professional will verify that you're a candidate for whitening, assess your shade and apply a thin layer of whitening varnish to your teeth, followed by a quick-drying sealant. A half-hour later, you can brush or wipe the varnish off.

Post treatment

Combine with Philips Zoom DayWhite or NiteWhite take-home whitening treatments for continued results and a brighter, whiter smile. Ask your dentist which take-home option best is the best option for you.
