Highlights

Clinically proven to reduce colic

Duration of reported colic per 24 hours at 2 weeks

A clinical trial demonstrated that at 2 weeks of age, babies fed with the Avent Bottle experienced less colic than babies fed with a conventional bottle. (www.philips.com/Avent).

Built-in Airflex Valve

The Avent Airflex Natural Feeding Bottle uses an Airflex Valve which works with baby's natural feeding rhythm.

Combine breast and bottle

The wide breast shaped nipple promotes natural latch on similar to the breast, making it easy for your baby to combine breast and bottle feeding

Easy latch on

Unique valve on the nipple flexes to your baby's feeding rhythm. Milk will only flow at the pace chosen by your baby to minimize overeating and spit-up, burping and gas

Significantly reduces fussing

Sleep and nutrition are vital to your baby's health and happiness. A randomised clinical trial was carried out to see whether infant baby bottle design affects "infant behavior". The Philips Avent Classic baby bottle was shown to significantly reduce fussing by approximately 28 minutes a day as compared to the comparator bottle (46 min vs 74 min, $p=0.05$) This was especially true during the night-time.**

Fits your baby's growing needs

Five different nipple flow rates are available.
