Istaknute znač.

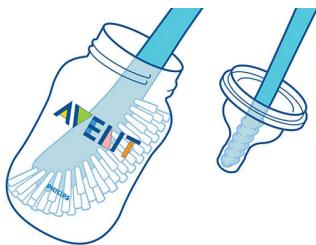

Prilagodava se potrebama bebe tijekom njenog razvoja

Dostupne su dude s pet jačina protoka.

0% BPA

Ovaj proizvod sadrži 0% BPA (bisfenol A)

Četka za bočicu i dudu

Posebno zakrivljena glava četke i izolirana drška omogućavaju dosezanje kutova svih vrsta bočica, duda i opreme za hranjenje te njihovo temeljito čišćenje.

Klinički dokazane bočice

Jedinstven sustav protiv kolika sastoji se od dude tvrtke Philips Avent i adapterskog prstena koji omogućavaju prolazak zraka u bočicu, a ne u trbušići bebe radi osiguravanja bolje probave.*

Orthodontic teat

Orthodontic teat promotes natural development of the baby's palate, teeth and jaw. All teats are made of silicone and do not have taste or smell.

Easy latching

The unique vent on the teat bends to follow the baby's mouth during feeding. Milk flows quickly because the baby latches onto the teat, which promotes natural feeding, burping, and cleaning.

It soothes the baby

Philips Avent bottles soothe the baby because they are designed to mimic the natural feeding experience.

Philips Avent bottles soothe the baby because they are designed to mimic the natural feeding experience. The company conducted a study comparing Philips Avent bottles with standard bottles. The results showed that babies slept longer at night (28 minutes vs. 46 minutes) and had fewer colic episodes (74 minutes vs. 46 minutes). This is due to the unique venting system that allows air to pass through the teat, reducing gas build-up in the baby's stomach.

Unique anti-colic system

When the baby feeds, the unique vent on the teat bends to follow the baby's mouth during feeding. Milk flows quickly because the baby latches onto the teat, which promotes natural feeding, burping, and cleaning.

It soothes the baby

Philips Avent bottles soothe the baby because they are designed to mimic the natural feeding experience. The company conducted a study comparing Philips Avent bottles with standard bottles. The results showed that babies slept longer at night (28 minutes vs. 46 minutes) and had fewer colic episodes (74 minutes vs. 46 minutes). This is due to the unique venting system that allows air to pass through the teat, reducing gas build-up in the baby's stomach.

San and feeding are key for the health and well-being of your baby. A clinical study was conducted to determine if the design of the Philips Avent bottle promotes "natural feeding" for newborns. The results showed that the Philips Avent bottle reduced colic episodes by 50% compared to standard bottles.

Specifikacije

Dizajn

Dizajn boćice: Široko grlo, Ergonomski oblik

Značajke

Može se sterilizirati

Materijal

Ne sadrži BPA*

Što se nalazi u paketu

Boćica za bebu: 4 kom.
Bottle and nipple brush: 1 kom.
