

Cleaning the air of particles and gases

(Please read from the bottom)

ZEOLITE GAS FILTER + NCCO

- Low sensitivity to humidity.
- Continuous rejuvenation by active oxygen results in a 5-year effective filter lifespan.

Stage 6: Active oxygen reacts with the zeolite gas filter to clean out the trapped gases and odours, so that the filter rejuvenates.

Stage 5: The zeolite gas filter traps a wide range of harmful gases and odours.

Stage 4: Active oxygen sterilises the trapped bacteria and viruses.

ESP PARTICLE FILTER

- Traps ultra-fine particles down to 0.02 µm-10 µm.
- >99% filtration efficiency.

Stage 3: Charged ultra-fine particles are trapped by the ESP particle filter.

Stage 2: Finer particles are charged by the corona particle charger.

Stage 1: The pre-filter catches big particles.

The Philips Air Cleaner filters many particles and dust from the air, but does not filter out heavy dust particles that fall quickly to the floor.

*The lifetime of the filters is substantially shortened by exposure to tobacco smoke:

- 0 to 1 cigarette a day: estimated lifetime of 5 years
- 5 to 10 cigarettes a day: estimated lifetime of 6 to 12 month
- 20 cigarettes a day: estimated lifetime of 3 to 6 months

* Based on an average of 8 hours.
