Highlights

2 cutting and slicing speeds

You can choose which speed you need for your cutting, depending on the dish or recipe you are making. For cutting julienne use speed 1 and for slicing and grating use speed 1 for soft ingredients like mushrooms and speed 2 for hard ingredients like carrots and salami.

XL feeding tube

The XL feeding tube (76 x 50 mm) allows you to use all kinds of ingredients, without cutting them into small pieces before putting them in the feeding tube.

5-in-1 DirectCut technology

Due to the perfect design of the Cutting tower, it cuts directly into the pan. It will save you time as you don't need to cut on a separate

plate, which you then don't have to clean afterwards either. And you cut your ingredients directly into the pan just when you need them.

Dishwasher-safe parts

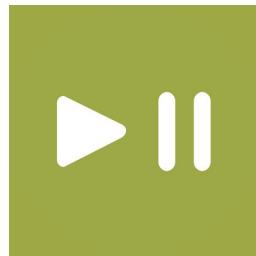

To optimise the time spent in your kitchen, you can safely put the pan, lid, stirrer and steaming tier in your dishwasher.

Safety lock for safe use

The two safety locks on the back of the Cutting tower prevent the Cutting tower from working when it is not properly closed. Both locks have to be closed and then the appliance is ready for cutting. This means you will always be using the appliance safely.

Variety of shapes and sizes

The Cutting tower comes with 5 different cutting discs that enable 2 sizes of slicing (thick and thin), 2 sizes of shredding (medium and coarse) and cutting julienne.
