

# PHILIPS

Remote care  
management

## Connected care. Empowered patients.

### Philips Engage remote care management

Healthcare providers are increasingly being asked to manage and improve patient outcomes at scale for large populations, without incrementally increasing costs or staff burdens. These challenges make implementing a blended care approach – where traditional care is combined with virtual care – particularly attractive. The clear goal is to provide accurate medical information, the final clinical outcome depends on the clinician, as well as further diagnostic and therapeutic options available – while actively engaging patients to participate in their own care journey.

Philips Engage offers a web-based clinical and patient decision support system designed to address these priorities and more. It can be used to enhance care for patients across the healthcare landscape – from monitoring patients in the hospital to remotely managing medical concerns.

#### Engage at a glance

- Empower practitioners to deliver patient-centric care using data-driven insights
- Facilitate care partnerships between clinicians, patients and families
- Allow and motivate patients to actively participate in their own care journey
- Inform clinicians so they can deliver the right care, at the right time, in the right care setting

# Strengthen communication and collaboration

Engage is a web-based clinical and patient decision support software platform intended to aid remote care management and facilitate communication between patients, caregivers, and healthcare providers.

Here are just some of the potential applications of Engage for practitioners:

- Integrate the right patient data into workflows
- Connect information across the care ecosystem and leverage data from multiple low to mid acuity remote patient monitoring (RPM) devices
- Get advanced visualization and tailored insights to simplify treatment decisions
- Provide virtual touch points that attract and maintain patient loyalty, and encourage patients to actively participate in their care
- Gain visibility into population health data

## Practitioners focus on what matters

- Focus on value-add services
- Forge a strong patient/provider partnership
- Encourage patients to actively participate in their care

## Engaged and empowered patients

- Access relevant care content
- Keep track of personal progress
- Interact with care providers

# Solutions for actionable population health management

Philips offers a suite of cloud-based software solutions for population health management. All software solutions are based on best practices – with a focus on ease of use – and can be implemented individually or combined with hardware and service offerings. This helps enable value-based health networks to provide personalized care collaboration across the care continuum.
