Highlights

Light awakes you naturally

Light gradually increases in 30 minutes before your set wake up time. Light falls on your eyes and positively affects your energy hormones, preparing your body to wake up. This makes waking up a more pleasant feeling.

300 Lux light intensity

The sensitivity to light differs a lot per person. In general, when using a higher light intensity a person needs less time to become fully awake. The light intensity of the Wake-up Light can be set up to 300 Lux. This makes sure you can wake up to the light intensity that suits your personal preference best.

4 natural wake-up sounds

At your set wake-up time, you will start hearing a natural sound or the selected radio station. It starts out quietly and takes a

minute and a half to reach the volume level you selected. There are four sounds you can choose from: morning birds in the forest, cows from the alpes, a chuckoo sound and relaxing yoga music. The gradually increasing sound will make the wake up process even more pleasant, ensuring you're never rudely awakened.

Digital FM radio

The built-in digital FM radio lets you wake up to your favourite songs or news station every day. Just select your favourite radio station, and at your set wake-up time it will start to play, at first gently, gradually increasing over ninety seconds to the volume level you selected.

Great sound quality

The speaker in this Wake-up Light is backed up by an integrated sound box, assuring a great sound quality when listening to the FM radio or when waking up with the natural wake-up sounds.

Sleep timer

The sleep timer lets you decide how long you want to leave the light on for reading or to listen to the radio, before you fall asleep.

Energy saving lamp

Wake-up Light is the only dawn simulator that makes use of an energy saving lamp. It consumes up to 24% less energy compared to a Wake-up Light with a normal light bulb.

Specifications

Technical specifications

Power: 38 W

Voltage: 230 V

Frequency: 50 Hz

Type of lamps: Philips Energy Saving Lamp

Lifetime of lamps: expected >6.000 hours

Cord length: 200 cm

Insulation: Class II (double isolation)

Weight and dimensions
