# Highlights

## Light-activated whitening

Philips Zoom WhiteSpeed uses an innovative and exclusive LED light to help you safely reach a brighter, whiter smile in less time. After your initial oral exam, the complete treatment takes just one office visit. Your procedure begins with a short preparation period followed by three 15-minute whitening sessions, with an optional fourth 15-minute session offered at the discretion of your dental professional.

## Proven comfort and results

Looking for noticeable whitening but worried about possible discomfort? Thanks to adjustable intensity settings for maximum comfort, 99 percent of patients experience little to no sensitivity with Philips Zoom WhiteSpeed.\*\* In a clinical study, Philips Zoom WhiteSpeed provided over 50 percent better whitening results than other in-office treatments,\*\*\* both immediately following the procedure, a week later and after 30 days.

## What patients are saying

Four real Philips Zoom patients share their teeth-whitening experiences. Visit the Philips Zoom YouTube channel for additional testimonial videos.

## What to expect

At your initial consultation, your dental professional will verify that you're a candidate for whitening, assess your shade and take impressions for your custom fabricated trays. Your in-office procedure will begin with prep and the first of four Zoom WhiteSpeed in-office whitening gel applications. The WhiteSpeed lamp will accelerate whitening so that each of the four sessions last only 15 minutes. Post treatment you will receive your fabricated trays, one DayWhite or NiteWhite take-home whitening gel syringe and a Relief ACP Oral Care gel syringe to relieve any tooth sensitivity.

# Specifications

## Items included
