## Designed to reduce colic, gas and reflux\*

Locks milk in, keeps air out

The AirFree™ vent is designed to help your baby swallow less air. The teat stays full of milk, even when horizontal, for upright feeding. Reducing the air a baby ingests can help ease common feeding issues like colic, gas and reflux.

### Additional benefits

- Use your bottle with or without the AirFree™ vent
- Mix and match with other Philips Avent products
- Different teat flow rates available

### Clinically proven to reduce colic and fussing\*

- Anti-colic system proven to reduce colic and fussing\*

### Designed for less air intake

- Teat stays full of milk, not air
- Locks milk in, keeps air out, for easy upright feeding

### Easy to use -- and clean!

- Teat shape designed for a secure latch-on
- Easy to clean & assemble, as AirFree™ vent is a single piece
- Simple to use

# Highlights

## Locks milk in, keeps air out

The teat stays full of milk, even when the bottle is horizontal, so your baby can drink in a more natural, upright position. This can help reduce reflux, aid digestion and make feeding time more comfortable for you and your little one.

## Designed for less air intake

Our unique AirFree™ vent draws air away from the teat so your baby swallows less air as they drink. This can help reduce common feeding issues such as colic, reflux and gas.

## Reduces colic and fussing\*

Clinical studies have shown that the Philips Avent bottle reduces colic and fussing\*. How? A valve in the teat prevents vacuum build-up as your baby drinks, allowing uninterrupted feeding. This can help reduce colic, gas, spit-up and burping.

## Easy to clean and assemble

The AirFree™ vent can be easily assembled with any Philips Avent Anti-colic and Classic+ bottle. Cleaning is also a breeze, as the bottle has a wide neck and there are only a few parts to clean.

## Simple to use

To start, fill the bottle with milk, place the AirFree™ vent over the rim, and screw on the teat. Tilt the bottle downwards once to fill the teat, and you're ready to go. When feeding, make sure that the AirFree™ vent stays on top. The teat will stay full of milk, even when it's horizontal, for easier upright feeding.

## Freedom of choice

You can use your Philips Avent Anti-colic bottle with or without the AirFree™ vent. The AirFree™ vent is compatible with our 125 ml (4 oz), 260 ml (9 oz) and 330 ml (11 oz) Philips Avent Anti-colic and Classic+ bottles.

## Designed for a secure latch

The shape of the teat allows for a secure latch-on, and the ribbed texture helps prevent teat collapse, for uninterrupted, comfortable feeding.

## Choosing the right teat

As your baby grows, their needs change when it comes to drinking. Choose a teat with a flow rate that's right for their development. The Philips Avent Anti-colic and Classic+ bottles can be used with or without the AirFree™ vent — but they should only be used with Philips Avent Anti-colic and Classic+ teats.

## Grows with your baby

We designed our Anti-colic bottle range so it's easy to mix and match tops and bottoms. This way you can progress easily from bottle to training cup to sippy cup, with fewer parts.

# Specifications

## Design

**Bottle design:** Ergonomic shape, Wide neck

## Material

**Bottle:** Polypropylene, BPA free

**Teat:** Silicone, BPA free

## What is included

**Baby bottle:** 2 pcs

**AirFree™ vent:** 1 pcs

**Teat:** Easy latch on, ribbed texture prevents teat collapse, clinically proven anti-colic

system\*

**Compatibility:** Full Anti-colic and Classic+ bottle compatibility

## Development stages

**Stage:** 0-12 months

\* The AirFree™ vent is designed to help your baby swallow less air. The teat stays full of milk, even when horizontal, for upright feeding. Reducing the air a baby ingests can help ease common feeding issues like colic, gas and reflux.

\* 80% of mums agreed that "my baby experienced fewer feeding issues" in a home placement test with 144 mothers in the US in 2017

\* At 2 weeks of age, babies fed with a Philips Avent bottle tended to develop less colic compared to conventional bottle feeding and a significant reduction in fussing at night compared to babies fed with another leading bottle.

\* What is colic and how does it affect babies? Colic is caused in part by swallowing air while feeding, which creates discomfort in a baby's digestive system. Symptoms include crying, fussing, gassiness and spit-up.
