- Personalize your sunrise and sunset experience

Designed for style and function

- A soft light to guide you in the dark
- Just tap the top of the product to snooze
- Smart touch display for easy device control
- AmbiTrack monitoring for your bedroom

Highlights

AmbiTrack monitoring

The built in AmbiTrack sensor measure our bedroom's temperature, noise, light, and humidity levels. You can see this information on your SleepMapper app where it suggests ways to improve your sleep space and routine.

SleepMapper app enabled

Through the SleepMapper app, Philips Connected Sleep and Wake Up Light offers you the ability to control your light and personalize your experience. You can set an advanced weekday or weekend alarm with the Advanced Alarm Scheduler that offers 20 different sounds, lights, and intensity patterns.

Personalize sunrise and sunset

Tailor your waking and sleeping routine with personalized sunrise and accompanying settings by adjusting the light's length and intensity, as well as soothing sounds. From the bright white sunrise of a crisp Nordic morning,

to the warm pink dawn in the Carribean, the Connected Sleep and Wake Up Light offers 4 different sunrises to personalize each day.

Optional additional alarm

If a simple snooze alarm can't do the job, the optional PowerWake alarm combines the blaring sound of a traditional alarm clock with flashing lights to get your out of bed, and avoid oversleeping.

With RelaxBreath for sleep

Inspired by well-known breathing and relaxation exercises our light-guided wind-down function is designed to help get you to sleep by helping you decompress from the day's activities and unwind. Follow one of seven rhythms of light intensity or sound with your breathing while keeping your eyes closed for a calm and peaceful transition from your day to your dreams

Midnight and reading light

When turned on in the middle of the night, the Connected Sleep and Wake Up Light provides a soft light that is just enough to let you find your way in the dark - without jarring your senses. The midnight light can be easily activated and de-activated with a few simple taps on the clock.

Smart touch display

Our seamlessly integrated multi-level touch display lets you set your chosen parameters intuitively and fast. Just approach the display with your hand and control your light with a touch on the buttons. The light will adjust the brightness of the display automatically to the light level in your room. You also have the option to switch off the display completely.

Tap to snooze

A slight tap on top of the wake-up light sets the snooze mode. After 9 minutes the sound will gently start playing again.
