- A range of flow rates are available for your growing baby

Clinically proven to reduce colic and discomfort*

- Anti-colic system proven to reduce colic*

Uninterrupted feeding

- Nipple shape designed for secure latch
- Nipple shape and ribbed texture prevents collapse

Highlights

Less colic

Our anti-colic valve is designed to keep air away from your baby's tummy to reduce colic and discomfort*. As your baby feeds, the valve integrated into the nipple flexes to allow air into the bottle to prevent vacuum build up and vents it towards the back of the bottle. It keeps air away from baby's tummy to help reduce colic and discomfort.

Uninterrupted feeding

The nipple allows secure latch and the ribbed texture helps prevent collapse for uninterrupted, comfortable feeding.

Secure latch

The nipple is designed not to collapse, for a secure latch and uninterrupted feeding.

Growing up with your baby

Mix and match our breast pump, bottle and cup parts, and create the product that works for you, when you need it!

Choose the right flow

Philips Avent Anti-colic nipples are available in different flow rates, to keep up with your baby's growth. We recommend replacing nipples every 3 months for hygiene reasons. Use Philips Avent Anti-colic bottles only with Philips Avent Anti-colic nipples.

BPA free

Philips Avent anti-colic nipple is made of BPA free material (silicone).

Compatible Anti-colic range

Full Compatibility with Philips Avent Anti-colic bottle with or without AirFree vent.

Development stages

Stage: 0-3 months

* At 2 weeks of age, babies fed with a Philips Avent bottle showed less colic, and significantly less fussing at night compared to babies fed with another competitor bottle.

* Nipple design proven to prevent nipple collapse and associated air ingestion and feeding interruptions.

* What colic is, and how it affects babies? Colic is caused in part by swallowing air while feeding, which creates discomfort in a baby's digestive system. Symptoms include crying, fussing, gassiness and spit-up.
