Recycling

-Do not throw away the appliance with the normal household waste at the end of its life, but hand it in an official collection point for recycling. By doing this . you help to preserve the environment - Follow your country's rules for the senarate collection of

electrical and electronic products. Correct disposal helps prevent negative consequences for the environment and human health.

2 Introduction

The MoistureProtect driver has an innovative new sensor technology called the Moisture Protect sensor. This technology has been specifically designed to preserve the natural hydration of your hair. The infrared sensor measures the temperature of your hair while drying it, diagnoses your hair and adapts the temperature to preserve its natural hydration. This gives advanced protection to your hair and scalp from overheating and therefore keeps your hair healthier and shinier. We've already turned the sensor on soyou can enjoy maximum protection right from the start. When the appliance is powered on, ions are automatically and continuously dispensed, reducing frizz and providing additional shine
