Shaving tips

This product is only intended for shaving and trimming body parts below the neckline. Do not use it to shave or trim facial or scalp hair.

- When shaving sensitive areas for the first time, you may experience some discomfort, irritation or reddening of the skin. This is normal as your skin needs time to adjust to shaving.
- If your hair is longer than 10mm, trim hair to a length of 3mm first for optimum shaving results.
- For dry use, make sure that your skin is clean and dry before you use the shaving unit.
- For wet use, prepare your skin with lathered soap or shaving foam before you use the appliance.

- 1 Remove any trimming comb from the appliance (see 'Removing or attaching trimming combs').
- 2 Switch on the appliance (see 'Switching the appliance on and off').
- 3 Stretch your skin taut with your free hand. Gently press the shaving unit onto the skin and move it slowly and smoothly against the direction of hair growth.
 - Do not press too hard. Too much pressure can distort the foil and cause skin irritation.
 - Make sure that the shaving unit is always in full contact with your skin.
 - The shaver is bi-directional, which means that you can shave by moving the appliance up and down. Shave against the direction of hair growth for optimal performance.
- 4 Switch off and clean the appliance after each use.
