Hair Style	Wavy curls	Loose curls	Tight curls
Temperature setting	170°C	190°C	210°C
Curling time setting	8s	10s	12s

8 When you hear four continuous beeps followed by a click, you can remove your finger from the curling button. Slowly and gently release your hair from the chamber.

9 Repeat steps 5-8 to style the rest of your hair.

4 Tips and Tricks

- If hair becomes trapped, check that the appliance is turned off and gently remove the trapped hair by pulling it out of the curls, section by section, until all the hair has been freed.
- Comb hair thoroughly. Ensure there are no tangles before curling.
- Separate hair into sections. Keep all unused hair away from the opening of the curling chamber.
- To prevent tangles, use an amount of hair which fits within the opening of the hair sectioning accessory.
- Start curling from the back of the head.
- (Fig. 4) Make sure that no stray or loose strands are near the opening of the curling chamber.
- Twist the hair once to make it easier to put it into the opening of the curling chamber.
- Use the contours of the opening to guide it into the chamber.
- Place the opening against the hair where you want the curls to start. Do not touch the hair with your hand.
- Hold the strands of hair taut when inserting them into the opening of the curling chamber.
- The heating time is indicated by the blinking of the power-on indicator. The appliance is ready for use when the indicator stays stable.
- Use a smaller amount of hair for longer hair lengths and/or to get more defined curls.
- To achieve different types of curls and looks, change the temperature settings, time settings and/or the rotation direction. (Fig. 1 & Fig. 2)
- (Fig. 6) If you like your curls to start only at ear level and below, you may also choose to hold the appliance horizontally. Hold your hair taut and in parallel to the opening to ensure easy insertion.
- Note: Make sure its FRONT (same side as the button) is facing you.
- Press and hold the curling button until you hear the continuous beeps followed by a click. If you remove your fingers from the curling button before the final sound indicated, the heat may burn your hair. Remove the hair and start over.
- The appliance intelligently identifies when hair is severely stuck and alerts you with continuous beeps followed by a click. To protect your hair from heat damage, the appliance will automatically turn off.

5 After Use

- 1 Switch off the appliance and unplug it.
 - 2 Place it on a heat-resistant surface until the curling chamber cools down.
 - 3 Keep it in a safe, dry place which is free of dust. You can also hang it with the hanging loop. (Fig. 5)
- Cleaning and Maintenance:**
- 1 Clean the surface of the appliance with a damp cloth.
 - 2 (Fig. 5) Insert the barrel cleaning accessory (A) into the curling chamber. Turn it continuously to remove residues.
 - 3 To clean the cleaning accessory, wash it under running water and leave it to dry completely before using it again.
