Preserve your hair's natural hydration For a healthy shine

MoistureProtect sensor uses infrared technology to diagnose your hair and adapts the temperature to preserve natural hydration. Up to 85% moisture preservation due to innovative sensor (measured after 5 minutes of drying, in 2013).

Caring technology

- MoistureProtect Sensor
- Protection from overheating

MoistureProtect technology

- Perfect moisture protection with exclusive sensor

Beautifully styled hair

- Ionic conditioning prevents static for frizz free shiny hair

Ease of use

- Six speed and heat settings for perfect control
- Cool Shot to set your style

Highlights

MoistureProtect Sensor

The truly innovative Infrared MoistureProtect technology continuously monitors and adapts the drying temperature to match your hair's drying needs. The intelligent sensor measures your hair's surface temperature 4000 times in one drying session, and adjusts the heat to prevent moisture loss and cuticle damage. With ultimate moisture retention, your hair gets our best shine and softness. You can switch on/off the sensor upon your needs.

MoistureProtect technology

Uses infrared technology to diagnose your hair and adapts the temperature to preserve its natural hydration.

ThermoProtect temperature

The ThermoProtect temperature provides the optimal drying temperature and gives additional protection from overheating the hair. With the same powerful airflow, you can get the best results in a caring way.

Ionic conditioning

Charged negative ions eliminate static, condition the hair and smooth down the hair cuticles to intensify the hair's shine and glossiness. The result is hair that is smooth, shiny and frizz-free.

Six speed and heat settings

Easily set and control the heat and speed settings to create the perfect style. Choose from 3 heat and 2 speed settings for full control and precise drying and styling.

Cool Shot

The Cool Shot button provides an intense burst of cool air. It is used after styling to finish and set the style.
