Volume from the roots

- Innovative semi-curved shape with protective bristles

Care for your hair

- Ionic care and Tourmaline ceramic
- Digital temperature settings to suit your hair type

Ease of use

- Protective cap for easy storage

Highlights

Easy style transformation

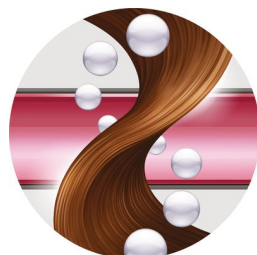

Glamour has become much more down-to-earth and uncomplicated. It's all about ease and speed rather than complex styling. With the Philips Volume Multi-styler you can transform your look easily: straight, curly looks or flicks just at a twist of a tip. Looking fabolus has never been easier.

Volume from the roots

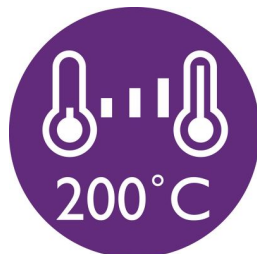

The Multi-styler's innovative semi-curved shape with protective bristles makes it possible to safely place styler close to your scalp to create visible volume from the roots. Simply place hair on the semi-curved surface and hold in position for several seconds. No matter what style you're going for – straight or curly – your hair will already have volume added from the roots.

Shine and Condition

Your Philips Volume Multi-styler is coated with Tourmaline ceramic to reduce static and ensure smooth gliding during styling. Ionic conditioning further reduces frizz and adds shine for beautiful, smooth results.

Digital temperature settings

Digital heat settings from 150C to 200C make it possible to choose the best temperature for your hair type. A maximum temperature of 200C ensures perfect styling results, even on thick hair, while minimizing hair damage.

Protective cap

The heat resistant protective cap can be popped on the Volume Multi-styler immediately after use, for convenient storage.
