# Highlights

## Air and micro-droplet tech

AirFloss utilises unique air and micro-droplet technology to send a burst of pressurised air and water or mouthwash between your teeth. The one-touch activation button is as simple as a mouse click.

## An easy way to start

Interproximal cleaning is very important to overall oral health. AirFloss is an easy way to clean deeper between teeth, helping to form a healthy habit. After three months of using AirFloss, 96% of inconsistent flossers continued to use AirFloss four or more days per week.

## 30-Second Clean

With the AirFloss, cleaning your entire mouth takes just 30 seconds. Simply press the button once for a single burst, then move and repeat. To use the new auto-burst feature, hold down the button and move the guidance tip from space to space. It will automatically burst every second.

## Better gum health

Sonicare AirFloss is clinically proven to improve gum health in just two weeks.

## Easy-fill reservoir

Fill the reservoir on the handle with either mouthwash or water for a refreshing clean, then point and shoot. The reservoir holds enough liquid for up to two uses.

## Guidance tip

The slim angled nozzle and guidance tip make finding the correct placement easy. Just slide along the tooth's surface near the gum line until the tip fits into the groove between the teeth.

## Helps prevent cavities

By gently bursting away plaque that brushing missed, Sonicare AirFloss helps prevent cavities from forming in the spaces between your teeth.

## Removes more plaque between teeth

Removes more plaque between teeth

## Ergonomic handle

Designed to be easy to manoeuvre in tight spaces, AirFloss has a comfortable ergonomic handle and a non-slip grip.
