Highlights

Brighter, whiter light output

Philips LED Headlamps feature our advanced LUXEON Altilon LEDs. This innovative technology delivers powerful, precise illumination and bright white 5600 K light output that's closer to the color temperature of daylight, while dramatically improving overall nighttime visibility.

Dual beam system

The split-lamp low beam and high beam offers a unique look, when on and off. In addition, the complex reflector design optimizes and evenly distributes for the best visibility and pattern.

Extremely impact resistant

Unlike your traditional headlamp, the Philips LED Headlamp is bulb-free and electronics are encapsulated in hardened epoxy to resist damage caused by shock and vibration. The LED Headlamp features a military-grade die cast aluminium housing and an impact-resistant polycarbonate lens. The 'split-lamp' appearance offers a unique look when on and off, and their ultra-rugged construction make these LED headlamps ready for tough conditions - on road or off.

Specifications

Technical specifications

Voltage: 12 V

Product description

Technology: LED

Application: Headlight

Designation: Philips LED Headlamp

Range: LED Headlamp

Color temperature: 5600

Light source: 2 LED Arrays

Replaces: 6052, 6053, H6054, HP6054

Type: 5" x 7" rectangular

Marketing specifications

Expected benefits: 50x longer life

Product highlight: whiter light output, Brighter, Impact resistant
