- Expected benefits: Bright modern interior

Product description

- Application: Interior light
- Base: SV8.5-8, w2.1x9.5d, Ba9s
- Color temperature: White 6500K
- Homologation ECE: NO
- Lifespan: 12 years
- Lumens [lm]: 130
- Marking ECE: -

- Range: X-tremeUltinon LED
- Technology: LED
- Type: Multi-sockets room lamp
- Voltage [V]: 12
- Wattage [W]: 1.5

Logistic data

- EAN: 8727900396126
- Quantity in box: X1
- Reference: 12826HCRIX1
- Ordering code: 39612630

Highlights

Automotive grade quality

The technologically advanced Philips lighting is renowned in the automotive industry, and has been for over 100 years. The Philips Automotive Grade Quality products are designed and developed following strict quality control processes (including applicable ISO norms), leading to consistently high production standards. Major car manufacturers choose Philips lamps, because when you buy Philips, you buy quality. You get powerful bright light, and precise beam performance. You get high-end style. And you get an advanced LED lighting system for a safer, smoother and more enjoyable drive.

Long-lasting LED lighting

You want bright and stylish car lights. But you don't want to keep replacing failed lamps. That is a major weakness of conventional headlights; the more powerful the light, the shorter its lifespan. At the same light intensity, LEDs last much longer. And Philips X-tremeUltinon LED lights are extremely durable. Due to the latest technological innovation, they prevent heat and vibrational damage and last up to 12 years. With most cars replaced or upgraded within that time, your stylish new lights should last you the lifetime of your car.

Philips high CRI LED

Blue light waves creates a glare that can reduce visual contrast and affect sharpness and clarity. This also may be one of the reasons for eyestrain, headaches, physical and mental fatigue. Sources of blue light includes computer screen, electronic devices, fluorescent-light and LED lights. Philips high 90+CRI LED light emits less blue light than standard LED interior light, for better eyes comfort.

Ready, steady, installed!

Supplied with multi-socket options, to easily replace room lamp types T10 and festoon 30mm

Stylish interior lighting

CRI (color rendering index) is a measure of how accurately a light is rendering objects' true colors. Standard LED interior light may make colors to appear unnatural. Philips high 90+CRI LED light allows objects' colors to appear clear and vivid, improving their appearance.

See more inside your car

Whether it's your phone, your keys or your child's missing left shoe, at some point we've all had to search for a misplaced item in a poorly lit car. With Philips LED interior lighting, you get a warm, bright and uniformly diffused light. So the next time you're searching around in the trunk, the glove compartment or the floor of your car, you'll be able to see exactly what you're doing and find anything with ease.
