Brighter. Whiter. Stronger

Bright white LED headlights for high-end look

Philips X-tremeUltinon LEDs feature premium LUXEON LED with up to 6500K. Our patented SafeBeam technology projects up to 140% brighter light exactly where you need it. Built to last with advanced AirCool design.

Brighter whiter LED headlights for cars

- Get up to 140% brighter light for superior visibility
- Compatible with many car models

Upgrade your style

- Up to 6500K color temperature for crisp white light
- Upgrade your lights, upgrade your style

Longer lasting LED headlights

- Durable long-lasting LED headlights
- Innovative heat management systems for more lifetime
- Philips automotive lighting at the highest quality level

Superior light diffusion

- Powerful bright light, directed exactly where you need it

PHILIPS

Highlights

Vivid bright light

Driving in the dark is demanding, so you rely on your headlights. Forward and peripheral vision are both important to enhance your driving ability for a safer drive. With an intense bright beam, Philips X-tremeUltinon LED headlights improve your visibility by producing up to 140% brighter light on the road. Once you experience this daylight-like effect, you'll always prefer LED. The more you can see, the better you perform, the faster you react and the safer you are. So don't let darkness win, choose Philips and start driving at night with greater confidence and control.

Pure bright white light

With a color temperature of up to 6500K, the Philips X-tremeUltinon LED headlight based on automotive grade LUXEON technology produces a bright white, daylight-like beam. With clearer vision you're better able to spot obstacles faster and easier. Brighter lights make for a more comfortable and exciting night-time drive.

Stylish white light upgrade

If you're looking to upgrade your style, without buying a newer car, upgrading your headlights is one of the best ways to spend your money. Your car is an expression of who you are, so make a style statement with Philips LED headlights. Instead of yellow, you'll get a crisp, white and modern light. For that high-end look, most drivers choose the superior style of Philips X-tremeUltinon LED headlights.

Bright light where you need it

The best headlights are not simply the ones that produce the strongest light. Creating ever brighter LED bulbs for cars is the easier task. It's what you do with that extra light that matters. Uncontrolled bright light is not ideal for driving and can create dangerous glare. Fitted with SafeBeam technology, Philips LED headlights concentrate light where you need it. The uniform and accurate beam pattern is designed according to road safety regulations for halogen headlights. With more precise control of light, you have greater visibility, making you a better and safer night-time driver.

Greater Visibility

You want bright and stylish headlights. But you don't want to keep replacing failed lamps. That's a major weakness of conventional headlights; the more powerful the light, the shorter its lifespan. At a higher light intensity level, LEDs last much longer, and Philips X-tremeUltinon LED products show superior durability. Due to features such as AirFlux and AirCool heat management systems, they last for a long time. With most cars replaced or upgraded within that time, your stylish new headlights should last you the lifetime of your car.

Longer-lasting headlight lamps

LED headlight lamps generate heat that needs controlling. Philips AirCool technology is a smart cooling system that diverts heat away from the light's critical components. By increasing heat resistance, Philips LED headlights last longer than other comparable products currently on the market. But durable lights are not just about convenience and value for money, they're also about safety. You don't want your lights to fail while in use. With Philips X-tremeUltinon LED lights you can drive in total peace of mind.

Automotive grade quality

The technologically advanced Philips lighting is renowned in the automotive industry, and has been for over 100 years. The Philips Automotive Grade Quality products are designed and developed following strict quality control processes (including applicable ISO norms), leading to consistently high production standards. Major car manufacturers choose Philips lamps, because when you buy Philips, you buy quality. You get powerful bright light, and precise beam performance. You get high-end style. And you get an advanced LED lighting system for a safer, smoother and more enjoyable drive.

Durable Philips quality

Designed to be easily installed in compatible vehicles, drivers with maintenance experience will be able to upgrade compatible headlights with ease. However, it's recommended that you get your new Philips LED headlights installed by specialist mechanics – they will make sure you're ready to go. While these headlights are compatible with a wide range of existing car models, not all car types are supported.

Specifications

Packaging Data

- EAN1: 046677723736
- EAN3: 50046677723731
- Packaging type: X2

Product description

- Technology: LED
- Application: High beam, Low beam
- Range: X-tremeUltinon LED
- Type: H7
- Homologation ECE: NO
- Designation LED Type: LED-HL [-H7]
- Technical features: AirCool, SafeBeam

Electrical characteristics

- Voltage: 12 V

Marketing specifications

- Expected benefits: Superior white light
- Product highlight: Brighter. Whiter. Stronger.

Light characteristics

- Color temperature: Up to 6500K

Ordering information

- Order entry: 11972XUX2
- Ordering code: H7XULED
