

Addendum for MiraVision Mirror TV

① Introduction

The Mirror TV is designed to combine a decorative mirror with a LCD TV, to provide an exciting new display experience to customers.

The Mirror is intended for decorative in-door usage only. The product is not designed for usage in moisture rich environments like bathrooms.

The basic functionality of Mirror TV is covered in the by-packed TV user guide and this addendum.

② Selecting the right location

Due to the reflective surface, it is important to place the Mirror TV in a location where bright reflections will not interfere with viewing of the TV. The location of light sources should be considered before product installation.

③ Installation

The installation of Mirror TV requires certain skills, and it is recommended that a professional installer carry out product installation. An installation guide is available upon request via your local Philips sales organisation.

The by-packed TV user guide describes most TV related functions.

Take note of the differences for Mirror TV:

- There are no front panel controls (only infrared sensor and stand-by LED)
- The mains switch is located at the back side
- External loudspeaker connectors are located at the back side
