# Highlights

## Privacy mode

Organisations invest heavily to prevent information leakage. Visual hacking is low-tech, but hard to prevent in open spaces. Philips Privacy Mode offers an integrated solution for privacy without the hassle of the clumsy screen protector. Simply press a button to enter Privacy Mode, your screen appears dark and barely seen from both sides, but keeps clear visuals at the centre. You can secure confidential, sensitive or private data from visual hacking. A convenient switch allows you to quickly toggle between Privacy Mode and wide-viewing mode. Greatly boost your work productivity.

## Flicker-Free technology

Due to the way brightness is controlled on LED-backlit screens, some users experience flicker on their screen which causes eye fatigue. Philips Flicker-Free technology applies a new solution to regulate brightness and reduce flicker for more comfortable viewing.

## LowBlue Mode

Studies have shown that just as ultra-violet rays can cause eye damage, shortwave-length blue light rays from LED displays can cause eye damage and affect vision over time. Developed for wellbeing, the Philips LowBlue Mode

setting uses a smart software technology to reduce harmful shortwave blue light.

## EasyRead mode

EasyRead mode for a paper-like reading experience

## SmartErgoBase

The SmartErgoBase is a monitor base that delivers ergonomic display comfort and provides cable management. The base can swivel, tilt and rotate to various angles to ensure maximum comfort. The height-adjustable stand guarantees the optimal viewing level, reducing the physical strains of a long workday, while cable management reduces cable clutter and keeps the workspace neat and professional.

## Built-in stereo speakers

A pair of high-quality stereo speakers built into a display device. They may be visible front

firing, or invisible down firing, top firing, rear firing etc. depending on model and design.

## IPS technology

IPS displays use advanced technology that gives you extra-wide viewing angles of 178/178 degrees, making it possible to view the display from almost any angle — even in 90-degree Pivot mode! Unlike standard TN panels, IPS displays gives you remarkably crisp images with vivid colours, making it ideal not only for Photos, films and web browsing, but also for professional applications that demand colour accuracy and consistent brightness at all times.

## SmartImage

SmartImage is an exclusive leading edge Philips technology that analyses the content displayed on your screen and optimises your display performance. This user-friendly interface allows you to select various modes, like Office, Photo, Movie, Game, Economy etc., to fit the application in use. Based on the selection, SmartImage dynamically optimises the contrast, colour saturation and sharpness of images and videos for ultimate display performance. The Economy mode option offers you major power savings. All in real time at the touch of a single button!
