SCD180/01

Reduces colic and discomfort*

Designed for uninterrupted feeding

Our Anti-colic bottle is designed to keep air away from your baby's tummy to reduce colic and discomfort, while also minimizing feeding interruptions. With its integrated anti-colic valve, air is vented away from the baby's tummy.

Other benefits

- Soother with soft & flexible shield for fewer skin marks
- Compatible range from breastfeeding to cup
- This bottle is BPA free
- A range of flow rates are available for your growing baby

Clinically proven to reduce colic and discomfort*

- Teat shape designed for secure latch
- Ribbed texture prevents collapse for uninterrupted feeding
- Unique anti-colic valve – designed to reduce air ingestion

Easy to use, clean and assemble

- Leak-free design
- Wide neck bottle with rounded corner for easy cleaning
- Easy to clean and assemble with few parts
- Easy to hold

Development stages

Stage: 0-12 months

* 0% BPA, following EU regulation 10/2011

* * At 2 weeks of age, babies fed with a Philips Avent bottle showed less colic, and significantly less fussing at night compared to babies fed with another competitor bottle.

* ** Teat design proven to prevent teat collapse and associated air ingestion and feeding interruptions.

* *** What colic is, and how it affects babies? Colic is caused in part by swallowing air while feeding, which creates discomfort in a baby's digestive system. Symptoms include crying and fussing.
