Gateway

Remote door lock management

Remote viewing lock status

Remote adding PIN codes

DDA111AWW

One step to the Internet

Your entrance to smart life

By simply binding the Philips gateway with the smart lock, you can achieve personalized management of smart lock, such as remotely monitoring the status of the smart lock and creating PIN codes at any time.

IoT times, unlimited convenience

- realizing real-time remote monitoring of door lock status
- prolongs battery life
- easy to use smart lock with simple operation

Highlights

Wi-Fi connection to door locks

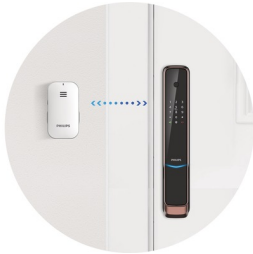

After connected to the network through the Philips gateway, the Philips smart lock can be controlled through the Philips EasyKey APP to realize remote door lock management, remote setting, and adding user PIN codes.

No need for extra installation

Just plug in the power socket, open the Philips EasyKey APP to bind the gateway and the Philips smart lock, you can start the journey of remote controlling smart lock.

Low-power Bluetooth

The Philips gateway uses low-power consumption Bluetooth technology to keep the smart lock with low consumption and lasting for longer.
