- Door's open when the hand is detected
- Unlock and open the door at one go

Smart life "locked" with excellence
- Say goodbye to the key-only era
- Unlock swiftly at one go

PHILIPS

Full auto smart door lock
System wake on touch Push-pull intuitive use, Auto locking function, Indoor infrared sensor unlock

Highlights

Multiple unlock methods

Multiple unlock methods

Unlocking methods like fingerprints, PIN codes, key tags, Bluetooth, mechanical keys, etc. are supported, which meet the need of different users, and applicable for the whole family.

Intuitive fingerprinting

Intuitive fingerprinting

The fingerprint sensor is integrated into the push-pull handle so that when you hold the handle, your finger will naturally fall on the sensor. After a successful fingerprint verification, you can directly push the handle to unlock the door in one step, which gives you a convenient door opening experience.

Indoor infrared sensor unlock

Indoor infrared sensor unlock

With a touch sensor and an infrared sensor on the indoor handle, once the hand touches the touch sensor and the infrared sensor detects the obstruction, the door can be easily unlocked.

Full auto mortise

Full auto mortise

Fully automatic mortise employed by Philips 9200 series smart door lock allows you to push to unlock the door without extra action. And the bolts will spontaneously retract after the successful verification. In case the door is not locked properly, the system will give an alert to remind you of the door lock status.

Dual verification

Dual verification

In the dual verification mode, you could open the door with any two verification methods (fingerprint, PIN code, and key tag), which provides double protection for home security.

Functional buttons

Functional buttons

[Open]: Double click the button within one second could unlock the door, and prevents accidentally unlocking by children and pets effectively. [Close]: Click once on the button could lock the door. Long press the button could enable inside deadlock. You could use the master PIN code or mechanical key to disable the inside deadlock mode. Simultaneously press the [Open] and [Close] buttons could enable or disable the inductive unlocking function.

Specifications
