PHILIPS

Smart video door lock
7000 series

Two-way intercom

PIR human body detection

Realtime's on Wi-Fi connection

Smart remote monitoring

DDL702IAFCW

Remote video monitoring
Visible security

Adopted with a PIR, when someone moves around within 3 meters at the front door, the Philips DDL702-1HWS will capture a photo or a video and push it to the App via Wi-Fi connection, allowing you to know who's at the door anytime.

Smart life "locked" with excellence
- Always know who's at the door
- Make real-time communication everywhere
- Instant pushed alert upon abnormal situation

Upgraded smart chip enhances home security
- Verification portfolio provides double security
- Technical lock-picking for more than 270 mins
- Instantly protect home security at all time

Easy life doesn't stop here
- Door's open when the hand is detected
- Eliminate the hassle of manually lockin
- Stable and long lasting

Highlights

Realtime's on Wi-Fi connection

Realtime's on
Wi-Fi connection

The DDL702-1HWS smart video lock makes real-time online via the Wi-Fi connection. After binding the Philips EasyKey App, you can view the lock activity history and encrypted information, remotely send temporary PIN codes, and view the real-time situation at the door by clicking the video button.

Two-way intercom

Two-way intercom

When the visitor presses the doorbell, a message will push to the APP instantly. If the APP runs in the foreground, it will receive a call reminder; if the APP runs in the background, it will receive a message. You could start a two-way intercom by tapping the message box to connect with the App. When the doorbell rings, the video lock will automatically record the video, so you won't miss any visitor information even when you are not home.

PIR human body detection

PIR human body
detection

Adopted with the PIR, when someone moves around the front door within 3 meters, the AI humanoid detection algorithm will identify abnormal dynamics by instantly capturing a photo or a video, and simultaneously pushing a message to the APP through the encrypted

cloud server. Now that it allows you to fully manage the dynamics at the front door and avoid security risks.

Dual verification

Dual verification

In the dual verification mode, you could open the door with both fingerprint and PIN code, which provide double assurance for home security.

C-grade lock cylinder

C-grade
lock cylinder

The lock cylinder is the key component that controls the opening of the lock. DDL702-1HWS' s C-grade lock cylinder employs multiple anti-theft technologies with a unique design of pin tumbler and vane structure. As the time for technical lock-picking resistance is more than 270 mins, enhanced security is assured.

Multiple alert function

Multiple alert
function

Featured multiple alerts of anti-dismantling, abnormal bolt, outside forced locking, and low battery level reminder, Philips DDL702-1HWS instantly safeguards the family and reminds you of the lock status. Now that is peace of mind.

Indoor infrared sensor unlock

Indoor infrared
sensor unlock

With a touch sensor and an infrared sensor on the indoor handle, once the hand touches the touch sensor and the infrared sensor detects the obstruction, the door can be easily unlocked.

Fully automatic mortise

Fully automatic
mortise

Philips DDL702-1HWS utilizes a fully automatic mortise. Without the need for extra action, the bolt will spontaneously pop up upon closing the door. If the door is not locked fitly, it will trigger an alert to remind you of the door lock status.

5000 mAh lithium battery

5000 mAh lithium
battery

When the battery charges to full capacity and Wi-Fi is continuously connected, the lithium battery life can last for 2 months* with a daily 5-minute video call and 10-time door opening. When the battery level is less than 7.2V, the "low-battery level" reminder will be pushed to the App, and the battery can last for approximately 1 month under the frequency of a daily 10-time door opening after the video function is automatically off.

Specifications

Access Solution
Fingerprint
Mechanical Key
Password/PIN Code

Design & Appearance
Color: Obsidian black, Red copper
Fingerprint Sensor: Semiconductor
Handle: Lever handle
Main Material: Zinc alloy

Easy Operation
Indicator: Door locks status prompt, Low battery prompt, Mute status prompt, Outside forced lock prompt, System locking prompt
Voice Guide: Human voice guide

Installation
Door Opening Direction: Left inward opening, Left outward opening, Right inward opening, Right outward oepning
Door Thickness: 38-60 mm, 60-90 mm, 90-120 mm, Other range*

Lock Capacity
Master PIN Code: 1
User PIN Code: Up to 20

Mode
Operationg Mode: Auto mode, Manual mode
System Setup Mode: Dual verification mode, Normal mode

Power Specification
Battery Type: Lithium Battery
Emergency Power Supply: 5V power bank

Smart Lock Functions
Mortise: C grade lock cylinder
Safety Function: Dual verification, Fake PIN code, Outside forced lock function

* These are experimental data, and the battery-lasting time is subject to actual using scenarios.
* The effect of the digital keypad showed in the photos of this product may be inconsistent with the actual display effect. Please be subject to the digital keypad displaying status under the actual usage scenarios.
* Other door thickness range: If the thickness of the door is out of the mentioned range, please contact our local dealers or consumer care center.
