- Unlock and open the door at one go

Multiple protection in one for overall home safety

- Protect your PIN security in real time
- Security is never forgotten
- Instant alarm upon inside unloc
- No more safety risks, be reassured while away
- Higher reliability and security

Highlights

Auto locking

Automatic locking

Philips Alpha-5HB employs full automatic mortise. Without the need for any extra action, the deadbolt will spontaneously pop out after you close the door. If the door is not locked properly, the mortise will give an alarm to remind you of the door lock status.

Class C lock cylinder

C–grade lock cylinder

Lock cylinder is the key component that controls the opening of the lock and is compared to the heart of a lock. Class C lock cylinder employs multiple antitheft technologies with unique design of the pin tumbler and vane structure, and is able to give high performance on preventing technical lockpicking.

Dual verification unlocking

Dual verification

In dual verification mode, you can use a combination of any two access methods among fingerprint, PIN code and key tag to ensure double-layer security for your home.

Hidden PIN code

Fake PIN Code

Philips Alpha-5HB comes with the feature of Hidden PIN Code technology which allows you to enter random number combinations to successfully get identified as long as there is consecutive input of the real PIN code. This feature can effectively prevent peeping and safeguard your real PIN code.

IML brushed finishing

IML finishing

The IML brushed surface has the hardness higher than 2H. Besides, it's waterproof, moisture proof and can keep fingerprint residue out.

Intuitive fingerprinting

Semiconductor fingerprint sensor

The fingerprint sensor is integrated in the push-pull handle so that when you hold the handle, your finger will naturally fall on the snesor. You can simply reach out and touch the sensor, then push to open after a successful fingerprint verification. The one-step unlocking will definately bring you a fast and convenient door opening experience.

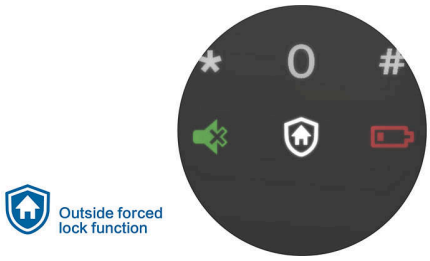
Multiple alerts

Multiple alarms

Philips Alpha-5HB is featured with all-around alerts，which not only improves the anti-theft level of your home, safeguard you and your family in real time, but also reminds you of the door lock status for better convenience.

Highlights

One-key outside forced lock



Before leaving home, you can touch the outside forced lock key to enable the function. In this mode, opening the door from inside the room will trigger an alert. This feature can effectively warn you of security risks and upgrade the level of home security.

Patented full auto mortise

The upgraded full automatic mortise makes it possible for instant unlocking right after a successful verification. Once you are recognized, you can directly push or pull the handle to open the door, which greatly simplifies the use of your door lock and brings you a fast and convenient in and out experience.

Safe handle switch

You can enable the safe handle function before you leave home. After the door is locked, the indoor handle will be fixed to ensure that nobody could open the door by pushing the indoor handle. This feature can effectively prevent unlocking from indoor, thus eliminating security risks and improves anti-theft performance.

1000 series

Push pull smart door lock

DDL111LAGGB/97

Specifications

Design & Appearance

Color: Champagne gold
Handle: Push-pull handle
