Smart life lock with excellence

- Easy access to the Internet
- The door will open when the hand is detected

Upgraded smart chip enhances home security

- Verification combination provides double security
- Effectively reminds security risks

7000 series

Push pull lock

Highlights

Built-in Wi-Fi module

A built-in Wi-Fi module allows you to connect to the Wi-Fi without a gateway. You can check the smart lock access records and PIN code information via the Philips EasyKey app anywhere. Remote distribution of a one-time PIN code saves more time for your visitors. You don't need to worry about keeping them waiting at the door for a long time even if you are not at home.

Indoor infrared sensor unlock

With a touch sensor and an infrared sensor on the handle, the door could be opened much easier. Once the hand touches the touch sensor and the infrared sensor detects the obstruction, the lock will open.

Dual verification

In the dual verification mode, you could open the door with any two verification methods (fingerprint, PIN code, and key tag), which provides double protection for home security.

Outside forced lock

Before leaving home, you can touch the outside forced lock button to enable the function. In this mode, opening the door from inside will trigger an alert. This feature can effectively remind you of security risks and upgrade the level of home security.
