

Allow your more experienced care teams to contribute to your entire imaging network

Connect imaging colleagues at a command center with radiographers at scan locations across your organisation in real time

Increasing demands on care systems put added pressure on already-stretched radiology departments. The need to do more with less, reductions in reimbursements and increasing case complexity continue to bring challenges related to staffing and resources into sharp focus. Philips Radiology Operations Command Center (ROCC) extends the reach of thinly stretched teams, bringing on-demand guidance and support to radiographers, and greater access to care for patients. ROCC is a digital solution with seamless telepresence for enabling collaboration across multiple sites, driving standardisation and quality for an efficient hub-and-spoke operation across your network. The solution works across vendors and modalities.

- **Extend** staff and amplify expertise
- **Accelerate** staff training
- **Reduce** recalls and repeats
- **Decrease** travel time between locations
- **Improve** communications
- **Increase** capacity and throughput
