- Recording time capacity: up to 9 min
- Call screening
- Answerphone remote access

Memory Capacity

- Call log entries: 10
- Phonebook: 2 phonebooks of 20 entries

Highlights

Handsfree on Handset

The handsfree speaker phone lets you hold a conversation while your hands are busy with something else and wherever you are. With both the speaker and the microphone in front of the handset, it is just like talking face to face with your correspondent.

Instrumental ringtones

Instead of the traditional aggressive "buzzer" ringtones, instrumental melodies are a more pleasant way to let you know when someone is calling.

CS² Crystal Sound System

Philips' unique Crystal Sound System (CS²) audio technology improves the sound quality of Philips DECT phones. CS² audio quality is demonstrably better than competitive DECT products and brings with it distinct benefits.

Plug & Play answering machine

DECT phones integrate a Plug & Play answering machine which is by default activated with a pre-recorded outgoing message and the answer & record mode for easy setting and use.

Caller name & number display

The name of the person or company calling is shown on the telephone display. The names of first-time callers can be displayed as well as those that are programmed into the telephone beforehand.

Paging key

Instead of looking in every corner of the house, simply call the handset from the base by pressing the dedicated key on the base station and the handset lets you know where it is hiding.
