Product highlights

Plug & Play pack - 2 handsets

A convenient Plug & Play phone package including a base and 2 handsets.

Free intercom

No need to stop what you are doing and go to give the handset to your son when his friend calls: you can freely and easily call the handset in his bedroom and transfer the call.

Phone-number display

The number of the person you want to call is displayed on the telephone display. You can verify it before seizing the telephone line.

Caller Identification

If you want to know who's calling you before you answer the call, then Caller Identification is for you. You can see the number (or the name) of the person calling, allowing you to decide whether to answer the phone or not. Caller Identification cannot disclose the number if the number is withheld, or unavailable. This service is country and network dependant, and requires a subscription to your network operator.

Paging key

Instead of looking in every corner of the house, simply call the handset from the base by pressing the dedicated key on the base station and the handset lets you know where it is hiding.

Instrumental ringtones

Instead of the traditional aggressive "buzzer" ringers, instrumental melodies are a more pleasant way to let you know when someone is calling.

Crystal Clear Sound Quality

The use of digital communication virtually eliminates interference, buzzing and hissing. It improves the intelligibility of messages left on the answering machine and even makes it possible for users to record and reproduce music.
