PHILIPS

Highlights

Digital Photo Recorder

Digital Photo Recorder is a powerful picture browser in your DVD recorder that provides you a simple and intuitive on-screen interface and lets you archive your precious digital pictures on durable DVD discs in full resolution as JPEG files or in MPEG format as a DVD-compatible slide show that plays on regular DVD players.

PCMCIA Media Slot

Media Slot is a simple card solution, giving you instant access to digital pictures from various memory card formats like Compact Flash, Memory Stick, SD card and MultiMedia Card via a PCMCIA adaptor.

i.LINK digital input

Also known as IEEE 1394 and FireWire, i.Link carries all audio and video signals via a single cable digitally, with no loss in picture and sound quality. With i.Link digital video input, you can copy your home videos in their original digital picture quality.

RGB input

RGB Component Video is the inter-connection standard for analog video with the highest quality -- sharper than S-video and composite video. Philips DVD recorders can record directly from RGB sources such as satellite receivers.

8 hours video recording (+RW)

The 8-hour record mode available on specific DVD recorder models lets you record up to eight hours of video on a single layer DVD+R/RW disc.

Two-Way Compatibility

DVD Recorders can play regular DVD-Video discs, but equally important is that DVD+R and DVD+RW discs recorded on them can be played on existing DVD-Video players.

Always compatible recordings

Always compatible recordings: with DVD+R/RW discs

Personalized Picture Screen

The Index Picture Screen is a DVD menu created on every DVD+R/RW disc that is also accessible on regular DVD players. It gives you an instant overview and easy access, so you can directly see what's on the disc, navigate to the recording you want to see.

Progressive Scan

Progressive Scan doubles the vertical resolution of the image resulting in a noticeably sharper picture. Instead of sending a field comprising the odd lines to the screen first, followed by the field with the even lines, both fields are written at one time. A full image is created instantaneously, using the maximum resolution. At such a speed, your eye perceives a sharper picture with no line structure.
