Ready to connect
- Works with home broadband connection and Wi-Fi router

PHILIPS

sense **and** simplicity

Highlights

Free Internet radio stations

Streamium comes with thousands of free Internet radio stations. Now you can stay abreast of all kinds of music worldwide. Connect your Streamium to the Internet and listen to your favourite online programmes on your audio system without having to turn on your PC.

Play MP3/WMA-CD, CD and CD-RW

Audio compression technology allows large digital music files to be reduced up to 10 times in size without radically degrading their audio quality. MP3 or WMA are two of the compression formats that let you enjoy a world of digital music on your Philips player. Download MP3 or WMA songs from authorised music sites on the Internet or create your own MP3 or WMA music files by

ripping your audio CDs and transferring them onto your player.

Wireless stream music and photos

Your PC/ MAC is filled with music that you can now conveniently stream onto your Philips audio device – without messy cables. Share your favourite songs with others at a party, or simply enjoy them in the comfort of your home. Do the same for your photo collections, and view them at leisure while you listen to music. Unlock your PC/ MAC treasures with the convenience of wireless streaming.
Remote control

Control all your Philips Hi-Fi system's functions from the comfort of your sofa. Search, navigate and play back your music with ease and speed. With direct keys such as

Home and Favourite, you can have quick access to your main screen or your favourite Internet station, or stream music from your PC/MAC and the Internet - wirelessly. The Hi-Fi control centre is in the palm of your hand.

Touch screen

Touch-screen control allows you to control your device by simply pressing on-screen buttons rather than physical buttons on the device. Simply power up the device and the touch-screen user interface will show up on the LCD display with all the control options for the device. Touch-screen control combines LCD display technology with pressure sensors and a powerful digital micro processor. When you press on a specific area of the screen with your finger, the relevant signal is sent to the processor and the command is immediately executed.
