3:2 Pulldown

3:2 Pulldown totally eliminates the unwanted artefacts that distort your picture viewing when watching movies. With these artefacts gone, you will enjoy the movie the way it is meant to be.

Video Upsampling

Video Upsampling is a technology that decreases distortion to dramatically improve picture quality. Increasing the video processing to 54MHz or even 108MHz, is in effect converting the video to 8:8:8* (54MHz) or 16:16:16 (108MHz) format which has about 4 to 8 time more horizontal resolution bandwidth than in standard DVD format. This processing reduces the MPEG "mosquito net" distortion dramatically resulting in picture quality that is pure and distortion free.

192kHz/24 bit audio DAC

192KHz sampling enables you to have an accurate representation of the original sound curves. Together with a 24-bit resolution, more information is captured from the original analogue sound wave form, giving a much richer audio reproduction.

Multi-format Movies-DivX, MP4

Multi-format playability allows you to play most disc formats for maximum compatibility and viewing pleasure.

Multi-format Music memory card

Multi-format playability allows you to play most disc and MP3 music from card formats (Compact Flash Type 1, SD cards, Multi Media Card, Memory Stick, Smart Media) for maximum compatibility and listening pleasure.

Multi-format Pic Memory Cards

Multi-format playability allows you to play most discs and MP3 music from the following card formats (Compact Flash Type 1, SD cards, Multi Media Card, Memory Stick, Smart Media) for maximum compatibility and viewing pleasure.
