- Handset speakerphone allows you to talk handsfree

PHILIPS

Highlights

4.8cm (1.9") graphical display

4.8cm (1.9") high contrasted graphical display with white backlight

Advanced privacy settings*

Black list restricts receiving calls from specific numbers or starting with certain digits. You can block 4 sets of numbers. Each set of numbers can consist between 1 to 24 digits. When there is an incoming call that starts with one of these numbers or being one of 4 exact Caller numbers. With silence mode you can disable the ringtones for specific times. Thanks to Call barring you can avoid expensive phone bill surprises by blocking calls to specific numbers starting with certain digits. Anonymous Call restricts incoming calls with hidden numbers. The phone will not ring.

Caller ID*

Sometimes it is good to know who is calling before you answer. And our Caller ID lets you keep track of who is on the other end of the line.

Event notifications

Event LED shows charging or call/ message status

Hearing aid compatible

Hearing aid compatible - reduces unwanted noise

Instant calling

Now calling the people you care about most is easier than ever. With simple one-touch dialing, you will never have to search for their number again, connecting at the touch of a button.

Keypad backlight

The soft amber backlight makes keys easy to read in low light conditions and at night.

Large display and characters

Extra large display and characters for easy reading

Two-field phonebook entries

These days most people have multiple contact numbers. Our contact list makes it easier for

you to manage your phone contacts. Simply save two phone numbers out of a choice of three different field names for home, work or mobile.

Up to 16 hours talk time

Up to 16 hours talk time on a single charge

Visual ringer

Visual ringer flashes to alert you of incoming calls

Volume boost

Do you sometimes wish a caller could speak a little louder? With the one touch volume boost key, you can instantly increase the volume by over 12dB* at the earpiece and over 8dB* at the handsfree speaker. Now you can hear every word and tone loud and clear. No conversation will be misunderstood ever again. *measurement is based on the lowest volume level to the maximum boost up volume level. Users are advised not to put the handset close to the ear when the boost up key is first pressed. Boost up volume will return to normal by ending the call.

Handset speakerphone

Handsfree mode uses a built-in loud speaker to amplify the voice of the caller, allowing you to speak and listen during a call without holding the phone to your ear. This is especially useful if you want to share the call with others or simply multitask.
