MTM speakers

Midwoofer-tweeter-midwoofer (MTM) configuration in all main and satellite speakers allow loud and truly reproduced sound regardless of listening position. You can always enjoy crystal clear sound without distortion no matter when you are sitting.
HDMI 4K2K

HDMI 4K2K incorporates the HDMI 1.4 standard. This adds support for ultra-high definition (UHD) video content. Presently this refers to 4K, which at its largest is 4096 pixels wide by 2160 pixels high or four times the size of a standard 1080p HD display. The term covers a slightly lower 4K resolution of 3840 pixels wide by 2160 pixels high. Both formats are supported through HDMI 1.4. 4K displays put high-end home theater systems in the same sphere used in many commercial movie

theaters. To make the speakers future resistant, this standard has been integrated for the growth of 4K TV.
Subwoofer base reflector

Dome shaped base reflector enhances a stronger and deeper base by radiating sound smoothly in 360 degree direction. The design also prevents damping effect when the subwoofer is being placed on carpet.

Bluetooth wireless streaming

Bluetooth wireless music streaming from your music devices

NFC technology

Pair Bluetooth devices easily with one-touch NFC (Near Field Communications) technology. Just tap the NFC enabled smartphone or tablet

on the NFC area of a speaker to turn the speaker on, start Bluetooth pairing, and begin streaming music.

Dolby Digital and Pro Logic II

A built-in Dolby Digital decoder eliminates the need for an external decoder by processing all six channels of audio information to provide a surround sound experience and an astoundingly natural sense of ambience and dynamic realism. Dolby Pro Logic II provides five channels of surround processing from any stereo source.
