Product highlights

SonoWave

The SonoWave surround sound system, powered by a full multi-channel amplifier, uses an advanced digital sound processing technology that provides multi-channel surround sound from fewer speakers. By positioning independent drivers at precise angles, a powerful multi-channel surround sound is produced and experienced in any room shape and size.

Progressive Scan

Progressive Scan doubles the vertical resolution of the image resulting in a noticeably sharper picture. Instead of sending a field comprising the odd lines to the screen first, followed by the field with the even lines, both fields are written at one time. A full image is created instantaneously, using the maximum resolution. At such a speed, your eye perceives a sharper picture with no line structure.

Clean and neat cable management.

The clean and clever cable management system allows you to manage your cable connections through an ergonomically-designed interface.
