Free your music

Philips Streamium Connected Audio

PHILIPS

sense and simplicity

Free
your
music

The future of music is here

Boundless and seamless in all its possibilities, yet effortless in its simplicity and enjoyment.

With the 2008 Philips Streamium Connected Audio range, you'll experience limitless pleasure with your lifetime of music, in a multitude of ways.

This year's Streamium range will redefine the way you enjoy your favorite tunes all around your home – wirelessly. Go on and liberate your entire music collection from your PC or Wireless Music Center, and uncover a whole new universe of online music and internet radio stations. The choices are as unlimited as your imagination

Whatever the source, you'll enjoy all your music in powerful yet exquisite sound, delivered from Streamium's iconic design.

With cutting edge innovation meticulously integrated with exquisite design, a truly liberating experience awaits.

So, embrace the future of music. It is here and now.
And it is Streamium.

Dream it. Stream it.

Free your music, fill your space

Whether your music collection is stored on the Wireless Music Center or on your PC, with Streamium you can stream and enjoy all your music to any – or every – room in your home. Whether it's one song to fill your entire house or a different track for each room, it's completely up to you. No wires, no cables, no hassles. Just pure music enjoyment, unbound and unlimited.

That's not all. Streamium brings you a whole universe of internet radio and online music. Indulge in music, news and entertainment galore from radio stations all around the world – all at your fingertips. For ease of use, you can even create a favorite list of internet radio stations.

For even more music options, subscribe to online music services, like Rhapsody. Get unlimited access to millions of CD-quality tracks covering every imaginable genre. You'll be able to get personalized recommendations, explore new music or rediscover old favorites.

With Streamium, the possibilities – and pleasures – are endless.

Smooth control

Easy does it

Managing your entire universe of music is a real breeze with Streamium. It's all about efficient and intuitive control with smart features. For example, there's Easy Logic menu with clear and distinct icons for ease of use, as well as full-color Album Art display for easy recognition.

Then there's QuickJump, which instantly takes you to your desired song via the alphabetical route. You can rely on SuperScroll for accelerated search through tracks, albums, playlists, artists and genres. Zip through thousands of songs – or one at a time – smoothly and in mere seconds.

For more convenience, reach for the handy 2-way Remote Control. Important track data is clearly displayed on both the Remote Control and the Wireless Music Center LCD screen. You can control your music from the comfort of your couch, no need to get up and squint at the Center display. Get ready for total freedom and control – right at your fingertips.

SuperScroll

Sound sensation

For the audiophile in you

It's hard to imagine pure and powerful sound emerging from such a distinctly sleek form ... until you switch on your Streamium.

With Philips' suite of innovative sound technologies, you can transform any room into a soundstage. The Super Sound Panel of the Wireless Music System delivers pristinely balanced sound performance across the frequency spectrum – without any distortion. Flat panel speakers replace traditional bulky woofers and tweeters with a compact solution that melds discreetly with the design facade. The result is rich, full quality yet 'invisible' sound from an ultra-svelte sound system.

There's also the inclusion of 2-Way Speakers with an integrated tweeter to ensure crystal-clear high frequency sounds, plus a Mid-Range speaker to add warmth and texture to this clarity. Combined with the integrated subwoofer, you will truly feel the music.

Even in smaller Streamium Stations – like the transportable Music Station WAS6050 – a wide soundstage with exceptional clarity and superb bass performance are guaranteed with a 4-Speaker System and wOOx Technology. Plus, the entire Streamium range offers super-efficient Class 'D' Digital Amplifier, which generates robust, dynamic sound from a compact footprint.

With Streamium, your music – and life – will be soundly enriched.

Simplicity expressed

Just one look is an experience in itself

The signature Streamium design embodies a stylish simplicity that merely hints at its highly innovative functions. Philips' revolutionary speaker technology allows for the creation of a dynamic form so surprisingly sleek and refined that it appears almost ethereal.

Clean, minimalist lines subtly offset the layering of contrasting materials and textures. The creative application of noble materials adds a distinct appeal and harmonizes with any modern home environment.

The seamless expanse of a high gloss black front and a sheer, frameless panel – supported with a solid glass stand – all bestow the Streamium with a luminosity and weightlessness that complements its wireless abilities.

A touch of the power button brings the full color LCD display to life, while a soft glow radiates from the translucent enveloping border and the primary navigation control.

A cool combination of superb performance with beautiful design. That is Streamium.

Choose your Streamium

Your music, your way

Whatever your music enjoyment preferences, living space or lifestyle aspirations, there's a Streamium just for you. Your only challenge is to resist getting more than one.

Fill your entire home with your favourite music from a Wireless Music System. Play all your music from various sources on one system with a Wireless Micro HiFi System. Or, connect a Network Music Player to your PC and audio system to get instant access to your PC music library and online music service. With any of them, you can enjoy a galaxy of internet radio stations from around the world.

If you love your music and freedom, you'll love Streamium.

Wireless Music System

Play all your music in up to 6 rooms of your house.

Wireless Micro HiFi System

Listen to music from various sources on one system.

Network Music Player

Connect it to your PC and audio system, and enjoy your PC music, internet radio and online music service.

All your music in every room

Streamium Wireless Music System

Fill any or every room in your home with all your music. No wires, cables or hassles and definitely no more tussles with family members over music choices.

With the super-smart and ultra-stunning Streamium Wireless Music System WACS7500, you can store up to 1,500 CDs' worth of music on its built-in 80GB and stream one track – or different tracks – to up to 5 Wireless Music Stations around your home. You can also tune in to the wide and wonderful world of internet radio.

Featuring a combination of Class 'D' Amplifier, Super Sound Panel speakers, 4-speaker system, and wOOx loudspeaker technology, the Wireless Music System range delivers incredible sound quality for any space around your home.

So, go on and fill your home – and life – with music.

My Room, My Music

The Streamium Music Center can simultaneously stream different music to up to five Streamium Stations. That's six different music options that can be enjoyed anywhere in your house – instantly and concurrently.

Music Follows Me

Simply press the 'Music Follows Me' button and the same music will continue playing in whichever room that you're currently in, without the hassle of stopping, searching and restarting the track.

Music Broadcast

Having a party? Stream desired dance tracks or chill-out playlists from the Wireless Music Center to every Music Station in your home. Keep the groove – and the party – going!

Wireless Music System
WACS7500

 Direct internet radio access

All your music on one system

Streamium Wireless Micro HiFi System

One for all and all for one! Store and access your universe of music on one stylish system and enjoy your favorite tunes without the hassle of dealing with multiple devices.

The 80GB built-in hard disk can store up to 1,500 CDs (2,000 CDs on the 160GB version). Rip, store and play your entire collection, while Gracenote automatic song information search provides song information.

Want even more music? No problem. Simply stream music from your PC to the system, or plug and play directly from a USB flash memory device. And then there is internet radio, with thousands of radio stations to choose from. A Wireless Micro HiFi System offers instant access to your library of tracks from different sources.

How's that for easy convenience and flexibility?

**Wireless Micro HiFi System
MCi500H**

 Direct internet radio access

All your music from your PC and the Internet

Streamium Network Music Player

Place the Streamium Network Music Player anywhere in your house and connect it to your PC and audio system, to open up a whole world of music possibilities.

With one cool and compact player, you will have immediate access to your PC music library, internet radio and online music subscription services like Rhapsody -- wirelessly and effortlessly. You will get to enjoy this galaxy of music in exceptional sound quality on your existing entertainment system!

Thanks to the handy remote control and the large LCD display clearly showing all relevant information, you will rapidly navigate through your entire music collection with ease.

Conquer your music universe... from your couch.

 Direct internet radio access

* Internet Radio requires broadband Internet access.

** Online music subscription service requires broadband internet access, and is available only in some countries.

Smart and easy

Feature highlights

80GB hard disk/ 1500 CDs
160GB hard disk/ 2000 CDs

WHY Store your entire CD collection in one location - best of all, your music will always be well-organized and easy to find.

WHAT The 80GB/ 160GB hard disk comfortably holds a music collection of up to 1500 CDs/ 2000CDs.

HOW Simply copy your CDs to the hard disk once and all the corresponding information on artist, album and track will be automatically transferred as well. You can either play a CD and copy it at the same time or fast-transfer discs at 4 times the speed.

My Room, My Music

WHY Anyone - or everyone - can have access to your entire CD collection and enjoy what they want, when they want - in the room of their choice.

WHAT Any member of your family can independently select and play music from the stored collections in any room equipped with a Wireless Music Station. There can even be six different tracks playing in different rooms, all at the same time.

HOW Multiple User Access technology simultaneously streams music selected by the Wireless Music Station from the Wireless Music Center. There is no delay even when streaming to five stations at once.

Wireless Streaming

WHY You can listen to your favorite music collection anytime and anywhere within your home.

WHAT With wireless audio streaming, there's no waiting to download and store a large file on your audio device before listening to your favorite songs.

HOW Wireless audio streaming eliminates the need to download huge files and allocate storage space prior to playback.

Internet Radio

WHY Enjoy access to online radio stations from anywhere in the world. Expand your music horizons and listen to a wide variety of news, sports and entertainment updates.

WHAT Internet Radio is an audio broadcasting service that is transmitted via the internet. Some internet stations are affiliated with a 'terrestrial' radio station or network while others are internet-only radio stations, which are independent and devote their broadcasts only to the World Wide Web.

HOW Internet Radio is distributed using a streaming technology. One of the most popular formats is MP3.

Universal Plug & Play

WHY Connect your Wireless Music Center to other media devices so you can receive or transfer content easily.

WHAT This is an industry-standard technology that lets you connect to any Universal Plug & Play-enabled device to receive or transmit music.

HOW Your Wireless Music Center utilizes Universal Plug & Play for easy connection to other Universal Plug & Play-enabled devices.

Music Follows Me

WHY No need to reselect a track, album or playlist when you move to another room.

WHAT This feature allows you to enjoy music as you move from room to room, without having to navigate and start playback of your chosen tracks all over again.

HOW Simply press the 'Music Follows Me' button on any Wireless Music Station or on your remote control. Then as you enter another room, the music you were listening to will seamlessly continue playing.

Music Broadcast

WHY Great for parties or just for fun - play the same music in every room at once, with excellent sound quality.

WHAT This feature lets you send your choice of music to every Wireless Music Station in your home simultaneously - at the touch of a button.

HOW When activated, this feature instantly broadcasts your selected track or playlist to up to five Wireless Music Stations around your home. It can only be activated from the Wireless Music Center, so only you get to decide on the music you want to broadcast. Each station has an override function, so your guests in the other rooms can listen to different music if they want to.

Rip and Play

WHY No need to rely on your PC to rip your favorite CD songs - your Wireless Music Center can make MP3 conversions at the touch of a button.

WHAT Your Wireless Music Center can easily rip your CDs into MP3 format so you can store all your music on its hard disk. Enjoy the flexibility of having your entire music collection in one place and playing them from different Stations - at the same time.

HOW Simply slide in your CD and the Center will switch to CD mode automatically. The list of tracks will be displayed - press 'Record' to select the songs/tracks to be ripped, then hit 'Record' again for the Center to start ripping the CD onto the hard disk. Once it's done, switch to HD mode to playback and enjoy your music.

Gracenote

WHY No more looking up CD song information in the booklet! Gracenote automatically recognizes track details and makes it easy to organize your music according to artist, genre, album and song title.

WHAT Gracenote is an embedded database that contains the meta-data of the most popular CDs. The Gracenote online feature even allows you to perform online queries for track information, should the embedded Gracenote be unable to identify the track.

HOW The Wireless Music Center will display the album, artist and track information from the CD being played. If the CD cannot be recognized by Gracenote, the Center can perform an online query as long as it is connected to the internet.

USB Direct

WHY Enjoy the music on your USB flash memory device by playing it directly on the Wireless Music System at home.

WHAT Simply plug in your USB flash memory device to playback music through the Wireless Music Center or Station. You can also export music from the Wireless Music Center to the device.

HOW With USB Direct mode, just select the music on your USB flash memory device and use the keys on the Center or Station to control playback.

Docking Cradle for iPod

WHY You can enjoy the music collection on your iPod through the Wireless Music System.

WHAT Connect your iPod player directly to Philips' docking cradle on the Wireless Music Center or Station and enjoy your music in superb sound. Just sit back and use the remote control to navigate through your music. Meanwhile, your player will be charging on the dock.

HOW Simply switch the Wireless Music Center or Station to AUX IN mode before docking your portable player. Use the remote control to navigate the music you want to play from your iPod.

2-Way Remote Control

WHY Instantly see all the music information you need for easy navigation - right from your armchair.

WHAT The 2-Way Remote Control with built-in LCD screen shows exactly what you see on the display of your Wireless Music Center. Finding the music you want is as easy on the remote control as it is on the main unit. All the information you need - artist, album title, track name and number - is clearly displayed, so you can quickly navigate through your entire collection.

HOW The remote control can access information stored on the Wireless Music Center's hard disk. This means virtually any operation that can be performed on the Wireless Music Center can also be carried out on the remote control, and just as easily.

Super Sound Panel

WHY Super Sound Panel speakers offer excellent sound performance across the frequency spectrum without the inevitable bulk of conventional speakers.

WHAT A speaker system specifically designed for both compactness and sound quality. Instead of the conventional thick woofer, it uses Philips' patented speaker technology to deliver deep bass and a balanced, distortion-free sound from a very slim frame.

HOW Philips uses flat Plexi-Piston™ speaker technology to achieve full-range sound performance from a flat, compact design without compromising on either end of the audio spectrum.

Class 'D' Digital Amplifier

WHY Because you want all the advantages of improved digital sound quality.

WHAT The Class 'D' Digital Amplifier has greater than 90% efficiency compared to traditional AB amplifiers. This high efficiency translates into a high powered set with a small foot print.

HOW An analog signal is converted to a digital signal, which is then amplified before entering a demodulation filter to deliver the final, powerful output.

Micro Driver Sound

WHY Enjoy big, powerful yet qualitative sound from a surprisingly small unit that does not take up precious bedside space.

WHAT Micro Driver Sound Technology relies on a neodymium magnet that produces more powerful sound. Also, specially engineered and positioned parts deliver the highest quality of sound over the entire audible frequency range, with particular emphasis on powerful bass.

HOW The neodymium magnet produces a large magnetic force that, in turn, delivers powerful sound. Its design, construction and materials have all been extensively engineered to harness and project the widest possible range of audio signals.

Smart and easy

Feature highlights

wOOx Loudspeaker Technology

WHY Not only hear but also feel fantastic deep bass that will make all the difference in your music listening experience! As the human ear does not perceive low frequencies at the same level as higher frequencies, the bass needs to be enhanced to achieve the highest impact.

WHAT Philips patented wOOx technology is a revolutionary loudspeaker concept which generates bass that's significantly lower and louder than any other audio system.

HOW Special speaker drivers were developed to work in perfect harmony with the wOOx bass radiator. In addition, precise tuning between the main driver and the tweeter ensures a smooth transition from the low-mid to the higher frequencies. Because of the dual suspension, the excursion of the membrane can be extreme and this, in combination with the totally symmetrical sandwich construction, provides for very low and precise bass without noticeable distortion. By making optimal use of the full volume of the speaker box, this speaker system is able to produce exceptionally deep and dynamic bass to truly magnify the impact of the music.

SuperScroll

WHY SuperScroll offers speedy and simple navigation, enabling a quick and easy search for the song you want!

WHAT For fast and easy navigation to your favorite song. Navigate through thousands of songs easily and smoothly using your remote control.

HOW The longer you hold the up-down arrow keys on the remote control, the faster the list of items on the menu will scroll. A large icon helps you keep track of your position in the menu.

QuickJump

WHY If you have a particular song or playlist in mind, and want to quickly locate it with the press of a button.

WHAT By pressing a key on the alphanumeric keypad, you can promptly jump to the song or playlist that starts with that letter.

HOW When you are browsing a list of songs, albums or artists, press a letter on the alphanumeric keypad, and the items starting with the chosen letter will pop up.

Alphanumerical search

WHY You have thousands of songs in your library, but right now, you have a favourite song in mind, and want to get to it as quickly as possible.

WHAT You can use the alphabet or numbers on the remote control keypad to instantly find your favorite artist, track or album.

HOW Press 'Search' on the remote control and, using the alphanumeric keypad, type in the full name or just the first few letters of the desired track, artist or album to quickly get to your desired song(s).

Stream music from PC

WHY You want to lounge and enjoy high-quality music from your audio system. But your music is stored in the PC and you don't want to move or copy it to another device.

WHAT You can play back the entire music collection stored on your PC through the audio system, keeping the collection right in your PC.

HOW Simply stream music from the PC to the audio system through a network connection. The music is transferred in a continuous flow, and you can listen to it while it's being transferred. There is no need to wait for a complete download before listening to the music, nor is there need to convert or store the files.

On-line music service

WHY You want to have an instant access to millions of songs out there, including all the latest releases.

WHAT You can subscribe to online music services such as Rhapsody, and access millions of songs, covering every genre. With Streamium NP1100, you don't even need to turn on your PC to access the online music.

HOW With your online music service membership, pick the songs you want, stream them to NP1100 and play them on your audio system in great sound. Just make it sure that your NP1100 is connected to broadband internet.
