# Highlights

## Backlight on screen

Backlighting is a feature that illuminates the LCD screen or keypad for use in the dark. The two most common types of backlighting are LED and electroluminescent (EL). Remotes backlit with LEDs are typically bright but uneven with a yellow or green colour, while EL panels are smooth with blue, white or green shades.

## Low battery indication

To promptly be aware when the batteries need to be recharged or replaced.

## Simplified quick start guide

Simplified quick start guide provides assistance in setting up a universal remote control. Instead of typing in three or four-digit codes, an LCD screen is incorporated into the remote to guide you through the setup. Additionally, the quick start guide provides extra information to that displayed on the LCD screen for fast setup.

## Learning functionality

Learning functionality refers to the process through which a remote control captures and stores infrared signals from other remotes for later use. When device codes are not included in the on-board database, they can always be learned from the original remote, simply by pointing to it.

## 7-in-1 home entertainment remote

The 7-in-1 universal remote control allows you to program and operate up to 7 audio/video devices from almost any brand. The remote contains the IR codes of all kinds of home entertainment devices of almost any brand. With this single remote you can replace your collection of remote controls with one single controller.

## Add extra functionality

Improved way of adding and labelling functions makes it easier and faster to add extra functionality. So, no more missing functions.
