PHILIPS

Highlights

Automatic Volume Control

Automatic Volume Control offsets variations in sound signal, which can be caused by distance, signal strength or the caller's phone - so what you hear always remains consistent. Reducing the audio amplification for strong signals, and increasing it for weak ones, it means you can enjoy a smooth conversation without unwanted sound volume variation.

Caller ID*

Sometimes it is good to know who is calling before you answer. And our Caller ID lets you keep track of who is on the other end of the line.

Durable design

Durable design and build to last

Pure and clear sound

Parametric Equalizer delivers pure and clear sound

Direct volume control

Direct volume control on the base allows you to easily adjust the sound level during the call.

Easy to read display

Easy to read display with backlight

Handset speakerphone

Handsfree mode uses a built-in loud speaker to amplify the voice of the caller, allowing you to speak and listen during a call without holding the phone to your ear. This is especially useful if you want to share the call with others or simply multitask.

Intercom

Intercom between the base and an extra handset

Non-slip grip

The rear of the handset is treated with a special texture for added comfort and better grip.

Silence mode and mute mode

Value your privacy and quiet at home? Easily disable the ringtones for specific "no call" times to enjoy piece and silence. Thanks to the mute mode you can have a private discussion which the caller will not be able to hear.

Works even during power cuts

If you suffer from frequent power cuts in your area this phone is something you will appreciate. It allows you to make and receive calls even during power cuts. Just use the corded base and stay connected at any time.
