- One tap to set up izzylink™, no router, no password, no apps
- Stream all your music via izzylink™
- Play music in one room wirelessly via Bluetooth
PHILIPS
Fidelio

Highlights

izzylink™

izzylink™ is a wireless technology that uses the IEEE 802.11n standard to enable the link-up of multiple speakers to form a wireless network. The network connects up to five speakers without the need of a router, Wi-Fi password, or any smart device mobile app to set it up. You can add izzy speakers to the network easily to enjoy music playing at the same time in different rooms. Each speaker can still be switched between single mode for individual use or group mode for multiroom music with one tap.

One tap to set up izzylink™

No router, no password, no apps needed for set up. Just long press the "GROUP" button on two speakers to set up for the first time. Repeat to add a 3rd, 4th, or 5th speaker. Each long press of the "Group" button adds one new speaker at a time. Multiroom music has never been easier. Once complete, the izzylink™ network will be stored even when the speaker is unplugged.
Play music in one room

Philips izzy speaker lets you stream all your favorite music from your phone, tablet or computer, no matter which music or radio app you use.

Switch the lead speaker easily

In each izzylink™ group, any individual speaker can be the master, streaming music to the others. When you want to take the lead to share your own music, press the Bluetooth button on the speaker in your room and share that music from your device instantly. Other speakers in the same izzylink™ group will play the same music in sync at the same time. Sharing music with each other is just that easy.

Specifications
