- 20W RMS total output power
- Complete integrated sound system

Ready to connect

- Works with home broadband connection and Wi-Fi router

PHILIPS

Highlights

Free internet radio stations

Streamium comes with thousands of free Internet radio stations. Now you can stay abreast of all kind of music worldwide. Connect your Streamium to the Internet and listen to your favorite online programs on your audio system without having to turn on your PC.

Play MP3/WMA-CD, CD and CD-RW

Audio compression technology allows large digital music files to be reduced up to 10 times in size without radically degrading their audio quality. MP3 or WMA are two of the compression formats that let you enjoy a world of digital music on your Philips player. Download MP3 or WMA songs from authorized music sites on the Internet or create your own MP3 or WMA music files by

ripping your audio CDs and transferring them onto your player.

Wireless stream music & photos

Your PC/ MAC is filled with music that you can now conveniently stream onto your Philips audio device – without messy cables. Share your favorite songs with others at a party, or simply enjoy them at the comfort of your home. Do the same for your photo collections, and view them at leisure while you listen to music. Unlock your PC/ MAC treasures with the convenience of wireless streaming.

Remote control

Control all your Philips Hi-Fi system's functions from the comfort of your sofa. Search, navigate and playback your music with ease and speed. With direct keys such as

Home and Favorite, you can have quick access to your main screen, your favorite Internet station or stream music from your PC/MAC and Internet - wirelessly. The Hi-Fi control center is in the palm of your hand.

Touch screen

Touch screen control allows you to control your device by simply pressing on-screen buttons rather than physical buttons on the device. Simply power up the device and the touch screen user interface will show up on the LCD display with all the control options for the device. Touch screen control combines LCD display technology with pressure sensors and a powerful digital micro processor. When you press on a specific area of the screen with your finger, the relevant signal is sent to the processor and the command is immediately executed.
