#### 1. Important

This electronic user's guide is intended for anyone who uses the Philips monitor. Take time to read this user manual before you use your monitor. It contains important information and notes regarding operating your monitor.

The Philips guarantee applies provided the product is handled properly for its intended use, in accordance with its operating instructions and upon presentation of the original invoice or cash receipt, indicating the date of purchase, dealer's name and model and production number of the product.

### 1.1 Safety precautions and maintenance

#### Warnings

Use of controls, adjustments or procedures other than those specified in this documentation may result in exposure to shock, electrical hazards and/or mechanical hazards.

Read and follow these instructions when connecting and using your computer monitor.

Excessive sound pressure from earphones and headphones can cause hearing loss. Adjustment of the equalizer to maximum increases the earphones and headphones output voltage and therefore the sound pressure level.

#### Operation

 Please Keep the monitor out of direct sunlight, very strong bright lights and away from any other heat source. Lengthy exposure to this type of environment may result in discoloration and damage to the monitor.

- Keep the display away from oil. Oil may damage the plastic cover of the display and void the warranty.
- Remove any object that could fall into ventilation holes or prevent proper cooling of the monitor's electronics.
- Do not block the ventilation holes on the cabinet.
- When positioning the monitor, make sure the power plug and outlet are easily accessible.
- If turning off the monitor by detaching the power cable or DC power cord, wait for 6 seconds before attaching the power cable or DC power cord for normal operation.
- Please use approved power cord provided by Philips all the time. If your power cord is missing, please contact with your local service center. (Please refer to Service contact information listed in Important information manual.)
- Operate under the specified power supply. Be sure to operate the monitor only with the specified power supply. Use of an incorrect voltage will cause malfunction and may cause fire or electric shock.
- Protect the cable. Do not pull or bend the power cable and signal cable. Do not place the monitor or any other heavy objects on the cables, if damaged, the cables may cause fire or electric shock.
- Do not subject the monitor to severe vibration or high impact conditions during operation.
- To avoid potential damage, for example the panel peeling from the bezel, ensure that the monitor does not tilt downward by more than -5

degrees. If the -5 degree downward tilt angle maximum is exceeded, the monitor damage will not be covered under warranty.

- Do not knock or drop the monitor during operation or transportation.
- The USB Type-C port could only be connected to specify equipment with fire enclosure in compliance with IEC 62368-1 or IEC 60950-1.
- Excessive usage of monitor can cause eye discomfort, it's better to take shorter breaks more often at your workstation than longer breaks and less often; for example a 5-10 minute break after 50-60-minute continuous screen use is likely to be better than a 15-minute break every two hours. Try to keep your eyes from eye strain while using the screen for a constant period of time by:
  - Looking at something varying distances after a long period focusing on the screen.
  - Conscious Blinking often while you work.
  - Gently closing and rolling your eyes to relax.
  - Reposition your screen to appropriate height and angle according to your height.
  - Adjusting the brightness and contrast to appropriate level.
  - Adjusting the environment lighting similar to that of your screen brightness, avoid the fluorescent lighting, and surfaces that don't reflect too much light.
  - Seeing a doctor if your symptoms.

#### Maintenance

- To protect your monitor from possible damage, do not put excessive pressure on the LCD panel. When moving your monitor, grasp the frame to lift; do not lift the monitor by placing your hand or fingers on the LCD panel.
- Oil-based cleaning solutions may damage the plastic parts and void the warranty.
- Unplug the monitor if you are not going to use it for an extensive period of time.
- Unplug the monitor if you need to clean it with a slightly damp cloth. The screen may be wiped with a dry cloth when the power is off. However, never use organic solvent, such as, alcohol, or ammonia-based liquids to clean your monitor.
- To avoid the risk of shock or permanent damage to the set, do not expose the monitor to dust, rain, water, or excessive moisture environment.
- If your monitor gets wet, wipe it with dry cloth as soon as possible.
- If foreign substance or water gets in your monitor, please turn the power off immediately and disconnect the power cord. Then, remove the foreign substance or water, and send it to the maintenance center.
- Do not store or use the monitor in locations exposed to heat, direct sunlight or extreme cold.
- In order to maintain the best performance of your monitor and use it for a longer lifetime, please use the monitor in a location that falls within the following temperature and humidity ranges.

• Temperature: 0°C-40°C 32°F-104°F

Humidity: 20%-80% RH

Important information for Burn-in/ Ghost image

- Always activate a moving screen saver program when you leave your monitor unattended. Always activate a periodic screen refresh application if your monitor will display unchanging static content. Uninterrupted display of still or static images over an extended period may cause "burn-in", also known as "after-imaging" or "ghost imaging", on your screen.
- "Burn-in", "after-imaging", or "ghost imaging" is a well-known phenomenon in LCD panel technology. In most cases, the "burnin" or "after-imaging" or "ghost imaging" will disappear gradually over a period of time after the power has been switched off.

#### Warning

Failure to activate a screen saver, or a periodic screen refresh application may result in severe "burn-in" or "afterimage" or "ghost image" symptoms that will not disappear and cannot be repaired. The damage mentioned above is not covered under your warranty.

#### Service

- The casing cover should be opened only by qualified service personnel.
- If there is any need for any document for repair or integration, please contact with your local service center. (Please refer to Service contact information listed in Important information manual.)
- For transportation information, please refer to "Technical Specifications".

 Do not leave your monitor in a car/ trunk under direct sun light.

#### Note

Consult a service technician if the monitor does not operate normally, or you are not sure what procedure to take when the operating instructions given in this manual have been followed.

#### 1.2 Notational Descriptions

The following subsections describe notational conventions used in this document.

Notes, Cautions and Warnings
Throughout this guide, blocks of text
may be accompanied by an icon and
printed in bold or italic type. These blocks
contain notes, cautions or warnings.
They are used as follows:

#### Note

This icon indicates important information and tips that help you make better use of your computer system.

#### Caution

This icon indicates information that tells you how to avoid either potential damage to hardware or loss of data.

#### Warning

This icon indicates the potential for bodily harm and tells you how to avoid the problem.

Some warnings may appear in alternate formats and may not be accompanied by an icon. In such cases, the specific presentation of the warning is mandated by the relevant regulatory authority.

## 1.3 Disposal of product and packing material

Waste Electrical and Electronic Equipment-WEEE

This marking on the product or on its packaging illustrates that, under European Directive 2012/19/EU governing used electrical and electronic appliances, this product may not be disposed of with normal household waste. You are responsible for disposal of this equipment through a designated waste electrical and electronic equipment collection. To determine the locations for dropping off such waste electrical and electronic, contact your local government office, the waste disposal organization that serves your household or the store at which you purchased the product.

Your new monitor contains materials that can be recycled and reused. Specialized companies can recycle your product to increase the amount of reusable materials and to minimize the amount to be disposed of.

All redundant packing material has been omitted. We have done our utmost to make the packaging easily separable into mono materials.

Please find out about the local regulations on how to dispose of your old monitor and packing from your sales representative.

### Taking back/Recycling Information for Customers

Philips establishes technically and economically viable objectives to optimize the environmental performance of the organization's product, service and activities.

From the planning, design and production stages, Philips emphasizes the important of making products that can easily be recycled. At Philips, end-of-life management primarily entails participation in national takeback initiatives and recycling programs whenever possible, preferably in cooperation with competitors, which recycle all materials (products and related packaging material) in accordance with all Environmental Laws and taking back program with the contractor company.

Your monitor is manufactured with high quality materials and components which can be recycled and reused.

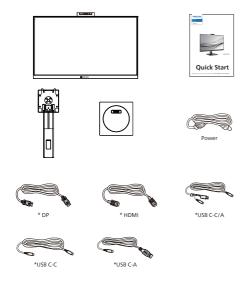

To learn more about our recycling program please visit

http://www.philips.com/a-w/about/ sustainability.html

#### 2. Setting up the monitor

#### 2.1 Installation

#### Package contents

\*Different according to region.

#### 2 Install the base

1. Place the monitor face down on a smooth surface. Pay attention not to scratch or damage the screen.

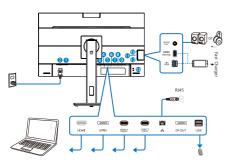

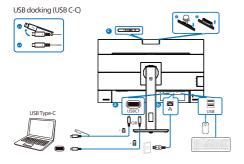

- 2. Hold the stand with both hands.
  - (1) Gently attach the base to the stand.
    - (2) Use your fingers to tighten the screw located at the bottom of the base.
    - (3) Gently attach the stand to the VESA mount area until the latch locks the stand.

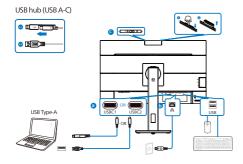

Note Secure the arrow of the base towards the front and fix to the column tightly.

#### 3 Connecting to your PC

- Power Switch
- 2 AC power input
- B HDMI input
- 4 DisplayPort input
- **5** USBC1 (PD 90W)
- 6 USBC2 (DATA)
- **7** RJ45 input

- 8 DisplayPort output
- 9 USB downstream
- Audio (In/Out): audio out / microphone in combo jack
- USBC (Power supply up to 15W)
- USB downstream/USB fast charger
- (B) Kensington anti-theft lock

#### Connect to PC

- 1. Connect the power cord to the back of the display firmly.
- 2. Turn off your computer and unplug its power cable.
- Connect the monitor signal cable to the video connector on the back of your computer.
- Plug the power cord of your computer and your monitor into a nearby outlet.
- Turn on your computer and monitor.
   If the monitor displays an image, installation is complete.
- 6. Remove the rubber plug when using DP out connector.

#### 4 USB C driver installation for RJ45

Before using the USB C docking display, please ensure to install the USB C driver. You can go to Philips website support page to download the "LAN Drivers". Please follow the steps for the installation:

- Install the LAN driver that matches your system.
- Double click driver to install, and follow Window's instructions to proceed with installation.
- 3. It will show "success" when the installation is finished.

- 4. You must reboot your computer after the installation has completed.
- Now you will be able to see "Realtek USB Ethernet Network Adapter" from your program installed list.
- We recommend to periodically visit the above web link to check for the availability of the most updated driver.

#### Note

Please contact Philips service hotline for Mac address clone tool as necessary.

#### 5 USB hub

To comply with International energy standards, the USB hub/ports of this monitor are disabled during Standby and Off modes.

Connected USB devices will not work in this state.

To permanently put the USB function in "ON" state, please go to OSD Menu, then select "USB standby mode", and switch it to "ON" state. Somehow if your monitor reset to factory setting, ensure to select "USB standby mode" to "ON" state in OSD menu.

#### 6 USB charging

This monitor has USB ports capable of standard power output including some with USB Charging function (identifiable with power icon USB). You can use these ports to charge your Smart phone or power your external HDD, for example. The monitor must be powered ON at all times to be able to use this function.

Some select Philips monitors may not Power or Charge your device when it enters to "Sleep/Standby" mode (White power LED blinking). In that case, please enter to OSD Menu and select "USB Standby Mode", then, turn the function to "ON" mode (default=OFF). This will then keep the USB power and charging functions active even when the monitor is in sleep/Standby mode.

#### Note

If you Turn OFF your monitor via the power switch at any given time, all the USB ports will power OFF.

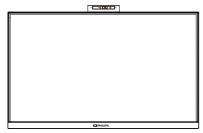

#### Warning

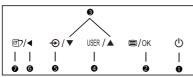

USB 2.4Ghz wireless devices, such as, wireless mouse, keyboard, and headphones, maybe have interference by the high-speed signal of USB3.2 devices, which may result in a decreased efficiency of the radio transmission. Should this happen, please try the following methods to help reduce the effects of interference.

- Try to keep USB2.0 receivers away from USB3.2 connection port.
- Use a standard USB extension cable or USB hub to increase the space between your wireless receiver and the USB3.2 connection port.

#### 2.2 Operating the monitor

1 Description of the control buttons

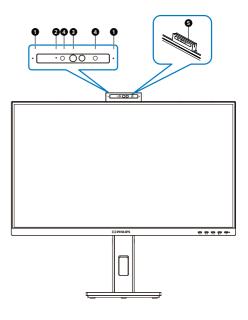

Switch monitor's power ON 0 (l) or OFF. Access the OSD menu. 2 | OK | Confirm the OSD adjustment. Adjust the OSD menu. 8 User preference key. Customize your own preference function from 4 **USER** OSD to become the "user key". Change the signal input 6 **①** source. Return to previous OSD 6 level. SmartImage hot key. There are multiple modes to select: EasyRead, Office, 7 回 Photo, Movie, Game, Economy, LowBlue Mode,

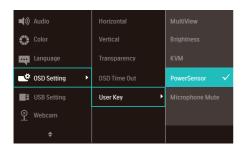

Off.

2 Webcam

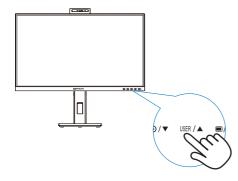

0	Microphone
2	Webcam activity light
3	5.0 Megapixel Webcam
4	IR of Face identification
6	Webcam light

- Customize your own "USER" key This hot key allows you to setup your favorite function key.
- 1. Press button on the front bezel to enter OSD Menu Screen.

- Press ▲ or ▼ button to select main menu [OSD Settings], then press OK button.
- Press ▲ or ▼ button to select [User Key], then press OK button.
- 4. Press ▲ or ▼ button to select your preferred function.
- 5. Press OK button to confirm your selection.

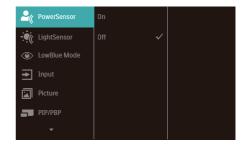

Now you can press the hotkey directly on the front bezel. Only your preselected function will appear for quick access.

4 Description of the On Screen Display

What is On-Screen Display (OSD)?
On-Screen Display (OSD) is a feature in all Philips LCD monitors. It allows an end user to adjust screen performance or select functions of the monitors directly through an on-screen instruction window. A user friendly on screen

display interface is shown as below:

Basic and simple instruction on the control keys

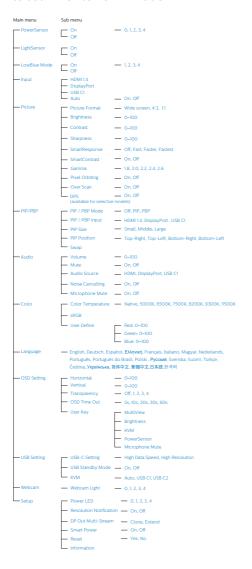

In the OSD shown above, you can press ▼ ▲ buttons at the front bezel of the monitor to move the cursor, and press OK button to confirm the choice or change.

#### The OSD Menu

Below is an overall view of the structure of the On-Screen Display. You can use this as a reference when you want to work your way around the different adjustments later on.

#### Note

If this display has "DPS" for ECO design, the default setting is "ON" mode: it makes the screen looks slightly dim; for optimum brightness, enter to the OSD to set "DPS" to "OFF" mode.

#### 5 Resolution notification

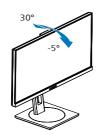

This monitor is designed for optimal performance at its native resolution, 1920 x 1080. When the monitor is powered on at a different resolution, an alert is displayed on screen: Use 1920 x 1080 for best results. Display of the native resolution alert can be switched off from Setup in the OSD (On Screen Display) menu.

#### Note

- The USB hub default setting of USB C input for this monitor is "High Data Speed". The maximum resolution supported depends on your graphic card capability. If your PC doesn't support HBR 3, select High Resolution in USB Setting, then the maximum resolution supported will be 1920 x 1080 @75Hz. Press button > USB Setting > USB > High Resolution
- 2. If your Ethernet connection seems slow, please enter OSD menu and select High Data Speed which supports the LAN speed to 1G.

#### 6 Physical Function

#### Tilt

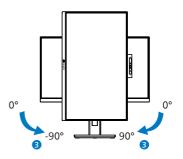

#### Swivel

#### Height adjustment

#### **Pivot**

#### Warning

- To avoid potential screen damage, such as panel peeling, ensure that the monitor does not tilt downward by more than -5 degrees.
- Do not press the screen while adjusting the angle of the monitor. Grasp only the bezel.

### 2.3 Built-in Windows Hello™ pop-up webcam

#### What is it?

Philips' innovative and secure webcam pops up when you need it and securely tucks back into the monitor when you are not using it. The webcam is also equipped with advanced sensors for Windows Hello facial recognition, which conveniently logs you into your Windows devices in less than 2 seconds, 3 times faster than a password.

### 2 How to enable Windows Hello™ pop-up webcam

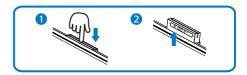

Philips monitor with Windows Hello webcam can be enabled by simply connecting your USB cable from your PC to the "USB C1" port or "USB C2" port of this monitor, then make a selection accordingly from the "KVM" section of your OSD menu. Now, the webcam with Windows Hello is ready to work as long as the Windows Hello setting in Windows10 is complete. Refer to Windows official website for the settings: https://support.microsoft.com/help/4028017/windows-learn-about-windows-hello-and-set-it-up

Please note that Windows 10 system is required for setting up Windows Hello: facial recognition; with an edition lower than Windows 10 or Mac OS, the webcam can work without the function of facial recognition. With Windows7 the driver is required to activate this webcam.

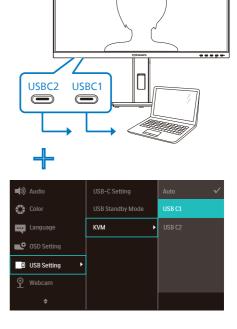

Operating System	Webcam	Windows hello
_		
Win7	Yes	No
Win8	Yes	No
Win8.1	Yes	No
Win10	Yes	Yes
Win11	Yes	Yes

Please follow the steps for the setting:

 Press the built-in webcam on the top of this monitor, and turn it to the front.

Simply connect the USB cable from your PC to the "USB C1" or "USB C2" port of this monitor

- 3. Setting in Windows 10 for Windows Hello
  - a. In the settings app click on accounts.

- b. Click on sign-in options in the sidebar.
- You need to set up a PIN code before you're allowed to use Windows Hello. Once you've added this, the option for Hello will unlock.

 d. You'll now see which options are available to set up under Windows Hello.

e. Click on "Get started." The setting is complete.

 If you connect the USB cable from "USB C1" port of this monitor, please enter OSD menu to make a appropriate selection of "USB C1" under the "KVM" layer.

#### Note

- Please always go to Windows official website to access the latest information, the information in EDFU is subject to change without further notice.
- Different regions have different voltages, with inconsistent voltage setting may cause water ripple when using this webcam. Please make the voltage setting same as the voltage of your region.
- 4. The webcam microphone mute function must be enabled through the Team, Skype Apps.

#### 2.4 MultiClient Integrated KVM

#### What is it?

With MultiClient Integrated KVM switch, you can control two separate PCs with one monitor-keyboard-mouse set up.

2 How to enable MultiClient Integrated KVM

With the built-in MultiClient Integrated KVM, Philips monitor allows to quickly switch your peripherals back and forth between in two devices through the OSD menu setting.

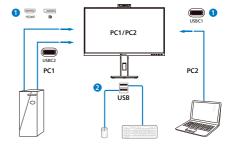

Use USBC and HDMI or DP as input, then use USB C as USB upstream

Please follow the steps for the settings.

 Connect the USB upstream cables from your dual devices to the "USBC1" and "USBC2" port of this monitor at the same time.

Source	USB Upstream
HDMI or DP	USB C2
USBC1	USB C1

Connect peripherals to the USB downstream port of this monitor.

3. Enter to OSD menu. Go to KVM layer and select "Auto", "USB C1" or "USB C2" to switch the control of peripherals from one device to another. Simply repeat this step for switching the control system using one set of peripheral.

Use DP and HDMI as input then use USB C as USB upstream.

Please follow the steps for the settings.

 Connect the USB upstream cable from your duel devices to the "USB C1" and "USB C2" port of this monitor at the same time.

PC1: USB C2 as upstream and HDMI or DP cable for both video and audio transfer.

PC2: USB C1 as upstream (USB C-A) and DP or HDMI for both video and audio transfer.

Source	USB Upstream
HDMI or DP	USB C2
DP or HDMI	USB C1

2. Connect peripherals to the USB downstream port of this monitor.

 Enter to OSD menu. Go to KVM layer and select "Auto", "USB C1" or "USB C2" to switch the control of peripherals from one device to another. Simply repeat this step for switching the control system using one set of peripheral.

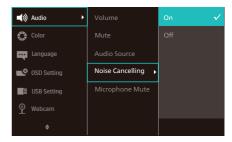

#### Note

You can also adopt "MultiClient Integrated KVM" in PBP mode, when you enable PBP, you can see two different sources projected to this monitor side by side simultaneously. "MultiClient Integrated KVM" enhances your operation by using one set of peripherals to control between in two systems through the OSD menu setting. Follow step3 as mentioned above.

#### 2.5 Noise Cancelling

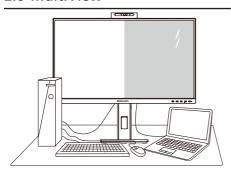

This monitor has Noise Cancelling functionality. When connected via USBC1/USBC2 during video conferencing, the monitor will automatically filter for human sounds. This function can be turned off in the OSD menu, under Noise Cancelling (default=ON).

#### Note

If multiple devices are connected to the display, both may play through the speaker at the same time. It is recommended to disable the audio output of the non-primary device.

#### 2.6 MultiView

#### 1 What is it?

Multiview enables active dual connect and view so that you can work with multiple devices like PC and Notebook side-by-side simultaneously, making complex multi-tasking work a breeze.

#### Why do I need it?

With the ultra high resolution Philips MultiView display, you can experience a world of connectivity in a comfortable way in the office or at home. With this display, you can conveniently enjoy multiple content sources at one screen. For example: You may want to keep an eye on the live news video feed with audio in the small window, while working on your latest blog, or you may want to edit an Excel file from your Ultrabook, while logged into secured company intranet to access files from a desktop.

- 3 How to enable MultiView by OSD menu?
- 1. Press button on the front bezel to enter OSD Menu Screen.

- Press ▲ or ▼ button to select main menu [PIP / PBP], then press OK button.
- 3. Press ▲ or ▼ button to select [PIP / PBP Mode], then press OK button.
- 4. Press ▲ or ▼ button to select [PIP] or [PBP].
- Now you can move backward to set the [PIP / PBP Input], [PIP Size], [PIP Position], or [Swap].
- 6. Press OK button to confirm your selection.
- MultiView in OSD menu
- PIP / PBP Mode: There are two modes for MultiView: [PIP] and [PBP].

[PIP]: Picture in Picture

Open up a sub-window of another signal source.

When the sub source is not detected:

#### [PBP]: Picture by Picture

Open up a sub-window side-by-side of another signal source.

A<sub>(main)</sub> B

When the sub source is not detected:

#### Note

The black strip shows on the top and the bottom of the screen for the correct aspect ratio when in the PBP mode. If you expect to see full screen side by side, adjust your devices resolutions as pop up attention resolution, you will able to see 2 devices source screen project to this display side by side without black strips. Note the analog signal is not support this full screen in PBP mode.

 PIP / PBP Input: There are three different video input to choose as the sub display source: [HDMI 1.4], [DisplayPort], and [USBC1].

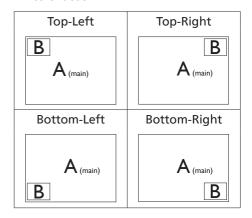

Please refer below table for compatibility of main/sub input source.

<->/		SUB SOURCE POSSIBILITY (xl)		
<b>Multi</b> View	Inputs	HDMI	DisplayPort	USBC1
MAIN	HDMI	•	•	•
SOURCE	DisplayPort	•	•	•
(xl)	USBC1	•	•	•

 PIP Size: When PIP is activated, there are three sub-window sizes to choose: [Small], [Middle], [Large].

 PIP Position: When PIP is activated, there are four sub-window positions to choose.

 Swap: The main picture source and the sub picture source swapped on the display.

Swap A and B source in [PIP] mode:

Swap A and B source in [PBP] mode:

• Off: Stop MultiView function.

#### Note

- When you do the SWAP function, the video and its audio source will swap at the same time.
- HDR and DP Out Multi-Stream cannot work with PIP/PBP (MultiView) simultaneously.

### 2.7 Remove the Base Assembly for VESA Mounting

Before you start disassembling the monitor base, please follow the instructions below to avoid any possible damage or injury.

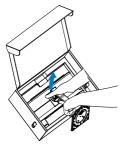

1. Place the monitor face down on a smooth surface. Pay attention not to scratch or damage the screen.

Place the monitor face down on a smooth surface. Pay attention not to scratch or damage the screen. Then lift the monitor stand.

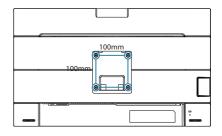

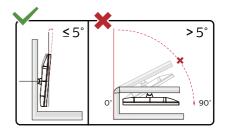

3. While keeping the release button pressed, tilt the base and slide it out.

#### Note

This monitor accepts a 100mm x 100mm VESA-Compliant mounting interface. VESA Mounting Screw M4. Always contact manufacturer for wall-mount installation.

\* Display design may differ from those illustrated.

#### Warning

- To avoid potential creen damage, such as panel peeling, ensure that the monitor does not tilt downward by more than -5 degrees.
- Do not press the screen while adjusting the angle of the monitor. Grasp only the bezel.

#### 3. Image Optimization

#### 3.1 SmartImage

#### What is it?

SmartImage provides presets that optimize display for different types of content, dynamically adjusting brightness, contrast, color and sharpness in real time. Whether you're working with text applications, displaying images or watching a video, Philips SmartImage delivers great optimized display performance.

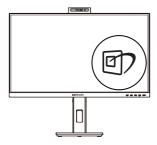

#### Why do I need it?

You want a display that delivers optimized display all your favorite types of content, SmartImage software dynamically adjust brightness, contrast, color and sharpness in real time to enhance your display viewing experience.

#### 3 How does it work?

SmartImage is an exclusive, leading edge Philips technology that analyzes the content displayed on your screen. Based on a scenario you select, SmartImage dynamically enhances the contrast, color saturation and sharpness of images to enhance the contents being displayed - all in real time with the press of a single button.

#### 4 How to enable SmartImage?

- 1. Press ( to launch the SmartImage on screen display.
- Keep pressing ▼ ▲ to toggle among EasyRead, Office, Photo, Movie, Game, Economy, LowBlue Mode, Off.
- The SmartImage on screen display will remain on screen for 5 seconds, or you can also press "OK" to make confirmation.

There are multiple modes to select: EasyRead, Office, Photo, Movie, Game, Economy, LowBlue Mode, Off.

- EasyRead: Helps improve reading of text based application like PDF ebooks. By using a special algorithm which increases the contrast and boundary sharpness of text content, the display is optimized for a stress-free reading by adjusting the brightness, contrast and color temperature of the monitor.
- Office: Enhances text and dampens brightness to increase readability and reduce eye strain. This mode significantly enhances readability and productivity when you're working with spreadsheets, PDF files, scanned articles or other general office applications.

- Photo: This profile combines color saturation, dynamic contrast and sharpness enhancement to display photos and other images with outstanding clarity in vibrant colors

   all without artifacts and faded colors.
- Movie: Ramped up luminance, deepened color saturation, dynamic contrast and razor sharpness displays every details in darker areas of your videos without color washout in brighter areas maintaining a dynamic natural values for the ultimate video display.
- Game: Turn on over drive circuit for best response time, reduce jaggy edges for fast moving objects on screen, enhance contrast ratio for bright and dark scheme, this profile delivers the best gaming experience for gamers.
- Economy: Under this profile, brightness, contrast are adjusted and backlighting finetuned for just right display of everyday office applications and lower power consumption.
- LowBlue Mode: LowBlue Mode for easy on-the-eyes productivity Studies have shown that just as ultraviolet rays can cause eye damage, shortwave length blue light rays from LED displays can cause eye damage and affect vision over time. Developed for wellbeing, Philips LowBlue Mode setting uses a smart software technology to reduce harmful shortwave blue light.
- Off: No optimization by SmartImage.

#### Note

Philips LowBlue mode, mode 2 compliance with TUV Low Blue Light certification, you can have this mode

by simply press the hotkey (17), then press to select LowBlue Mode, see above SmartImage selection steps.

#### 3.2 SmartContrast

#### 1 What is it?

Unique technology that dynamically analyzes displayed content and automatically optimizes a Display's contrast ratio for maximum visual clarity and viewing enjoyment, stepping up backlighting for clearer, crisper and brighter images or dimming backlighting for clear display of images on dark backgrounds.

#### Why do I need it?

You want the very best visual clarity and viewing comfort for every type of content. SmartContrast dynamically controls contrast and adjusts backlighting for clear, crisp, bright gaming and video images or displays clear, readable text for office work. By reducing your display's power consumption, you save on energy costs and extend the lifetime of your display.

#### 3 How does it work?

When you activate SmartContrast, it will analyse the content you are displaying in real time to adjust colors and control backlight intensity. This function will dynamically enhance contrast for a great entertainment experience when viewing videos or playing games.

#### 3.3 LightSensor

#### 1 What is it?

Light Sensor is a unique and intelligent way of optimizing picture quality by measuring and analyzing the incoming signal to automatically adjust picture quality settings. Light Sensor uses a sensor to adjust the picture brightness depending on the room light conditions.

2 How to enable LightSensor?

- 1. Press button on the front bezel to enter OSD menu screen.
- Press ▲ or ▼ button to select main menu [LightSensor], then press button OK.
- 3. Press ▲ or ▼ button to turn on or off the LightSensor.

#### 4. Power Delivery and Smart Power

You can power your compatible device with up to 90 Watts of power from this monitor.

#### 1 What is it?

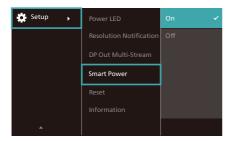

Smart Power is an exclusive Philips technology that provides flexible power delivery options for various devices.

This is useful for recharging high performance laptops with only one cable.

With Smart Power, the monitor makes it possible to deliver up to 90W of power through the USBC1 port, compared to the standard 65W.

To prevent damaging the device, Smart Power enables protections to limit current draw.

2 How to enable Smart Power?

- Toggle to the right to enter OSD Menu Screen.
- 2. Toggle to the up or down to select main menu [Setup], then toggle to the right to confirm.
- 3. Toggle to the up or down to turn on or off the [Smart Power].

- Power through USBC1 port:
- Connect the device to the USBC1 port.
- 2. Turn on [Smart Power].
- If [Smart Power] is on, and USBC1
  is used for power, then maximum
  power delivery depends on the
  brightness value of the monitor.
  You may adjust the brightness value
  manually to increase power delivery
  from this monitor.

There are 3 power delivery levels:

		Power Delivery
	value	from USBC1
Level 1	0~20	90W
Level 2	21~60	85W
Level 3	61~100	80W

- Note
- If [Smart Power] is on, and DFP (Downstream Facing Port) is using more than 15W, then USBC1 can only deliver up to 65W.
- If [Smart Power] is off, then USBC1 can only deliver up to 65W.
- PowerSensor and LightSensor cannot be enabled with Smart Power simultaneously.

#### 5. Daisy-chain function

DisplayPort Multi-Stream feature enables multiple monitor connections.

This Philips display is equipped with DisplayPort interface and DisplayPort over USBC1 which enables daisychaining to multiple displays.

Now you can daisy chain and use multiple monitors via a single cable from one display to the next.

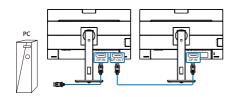

To daisy-chain monitors, first to check below:

Make sure the GPU on your PC support DisplayPort MST (Multi-stream transport).

#### **⊜** Note

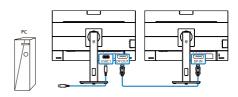

- The maximum number of connectible monitors may vary depending on GPU performance.
- Please check with your graphic card vendor and always update your graphic card driver.

### DisplayPort multi-streaming over DisplayPort

	Maximum number of external monitors that can be supported
	Extend mode (DisplayPort)
1920 x 1080 @60Hz	2

### DisplayPort multi-streaming over USBC1

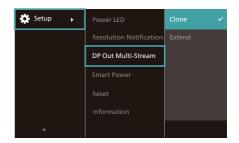

Display Resolution	Link Rate <sup>*1</sup>	USB Settings <sup>*2</sup>	Maximum number of external monitors that can be supported
	HBR2	USB 2.0	2 <sup>*3</sup>
@60Hz		USB 3.2	1
	HBR3	USB 2.0	2
		USB 3.2	2

#### Note

- To check link rate: press 
   □ button, select Setup > information. The screen will show HBR3, otherwise, the link rate is HBR2.
- We recommend to set USB Setting to USB 3.2, press ■ button, select USB Settings > USB, then select USB 3.2 which supports the LAN speed to 1G.
- Depends on the graphic card capability, you may connect maximum 3 external monitors.

To select one of DP Out Multi-stream modes:

Press ≡ button, select Setup > DP Out Multi-stream > Extend.

The secondary monitor in the chain must support DisplayPort multi-streaming, and the maximum resolution support is 1920 x 1080@60Hz.

# 6. Designs to prevent computer vision syndrome (CVS)

Philips monitor is designed to prevent eye strain caused by prolonged computer use.

Follow below instructions and use Philips monitor to efficiently reduce fatigue and maximum working productivity.

- 1. Appropriate environment lighting:
  - Adjusting the environment lighting similar to that of your screen brightness, avoid the fluorescent lighting, and surfaces that don't reflect too much light.
  - Adjusting the brightness and contrast to appropriate level.
- 2. Good working habits:
  - Excessive usage of monitor can cause eye discomfort, it's better to take shorter breaks more often at your workstation than longer breaks and less often; for example a 5-10 minute break after 50-60-minute continuous screen use is likely to be better than a 15-minute break every two hours.
  - Looking at something varying distances after a long period focusing on the screen.
  - Gently closing and rolling your eyes to relax.
  - Conscious blinking often while working.
  - Gently stretch your neck, and slowly tilt your head forward, backward, side for pain relief.

- 3. Ideal working posture
  - Reposition your screen to appropriate height and angle according to your height.
- 4. Choose Philips monitor for easy-oneyes.
  - Anti-glare screen: Anti-glare screen efficiently reduces annoying and distracting reflections that caused eye fatigue.
  - Flicker-free technology designs to regulate brightness and reduce flicker for more comfortable viewing.
  - LowBlue mode: Blue light may cause eye strains. Philips LowBlue mode allows you to set different blue light filter levels for variety working situation.
  - EasyRead mode for a paperlike reading experience, giving a more comfortable viewing experience while dealing with long documents on the screen.

#### 7. PowerSensor™

#### How does it work?

- PowerSensor works on principle of transmission and reception of harmless "infrared" signals in order to detect user-presence.
- When the user is in front of the monitor, the monitor operates normally, at the predetermined settings that the user has set- i.e. brightness, contrast, color, etc
- Assuming that the monitor was set to 100% of brightness for example, when the user leaves his seat and is no longer in front of the monitor, the monitor automatically reduces the power consumption upto 75%.

User present in front User not present

Power consumption as illustrated above is for reference purpose only

#### 2 Setting

#### **Default settings**

PowerSensor is designed to detect the presence of the user located between 30 and 100 cm (12 and 40 inches) from the display and within five degrees left or right of the monitor.

#### **Custom settings**

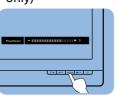

If you prefer to be in a position outside the perimeters listed above, choose a higher strength signal for optimal detection efficiency: The higher the setting, the stronger the detection signal. For maximum PowerSensor efficiency and proper detection, please position yourself directly in front of your monitor.

 If you choose to position yourself more than 100 cm or 40 inches

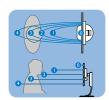

- from the monitor use the maximum detection signal for distances up to 120 cm or 47 inches. (Setting 4)
- Since some dark colored clothing tends to absorb infrared signals even when the user is within 100 cm or 40 inches of the display, step up signal strength when wearing black or other dark clothes.

#### Hot key

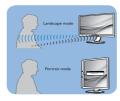

(for selected models only)

Sensor distance

#### Landscape/Portrait mode

Above illustrations are for reference purpose only, may not reflect the exact display of this model.

#### How to adjust settings

If PowerSensor is not operating correctly inside or outside the default range, here's how to fine-tune detection:

- Enter to OSD menu.
- You will find the adjustment bar.
- Adjust the PowerSensor detection adjustment to Setting 4 and press OK.
- Test the new setup to see if PowerSensor properly detects you in your current position.
- PowerSensor function is designed to work in Landscape mode (horizontal position) only. After PowerSensor turn on it, it will automatically turn Off if the monitor is used in Portrait

mode (90 degree/vertical position); it will automatically turn ON if monitor is returned to its default Landscape position.

#### Note

A manually selected PowerSensor mode will remain operational unless and until it is readjusted or the default mode is recalled. If you find that the PowerSensor is excessively sensitive to nearby motion for some reason, please adjust to a lower signal strength. Keep sensor lens clean, if the sensor lens is dirty, wipe it with alcohol to avoid reducing of distance detection.

<sup>&</sup>lt;sup>2</sup>The USB-C port USBC provides downstream data transfer and 15W of power.

<sup>&</sup>lt;sup>3</sup> The USB-C port USBC1 provides data, video transfer, and power delivery 90W.

#### 8.1 Resolution & Preset Modes

H. freq (kHz)	Resolution	V. freq (Hz)
31.47	720 x 400	70.09
31.47	640 x 480	59.94
35.00	640 x 480	66.67
37.86	640 x 480	72.81
37.50	640 x 480	75.00
35.16	800 x 600	56.25
37.88	800 x 600	60.32
46.88	800 x 600	75.00
48.08	800 x 600	72.19
47.73	832 x 624	74.55
67.50	960 x 1080 PBP mode	60.00
83.93	960 x 1080 PBP mode	75.00
48.36	1024 x 768	60.00
56.48	1024 x 768	70.07
60.02	1024 x 768	75.03
44.77	1280 x 720	59.86
60.00	1280 x 960	60.00
63.89	1280 x 1024	60.02
79.98	1280 x 1024	75.03
55.94	1440 x 900	59.89
65.29	1680 x 1050	59.95
67.50	1920 x 1080	60.00
83.89	1920 x 1080	74.97

- Note
- Please notice that your display works best at native resolution of 1920 x 1080 @ 60Hz. For best display quality, please follow this resolution recommendation. Recommended resolution HDMI 1.4/DP/USB C:1920 x 1080 @ 60Hz If your display is not on the native resolution when

- connecting to USB C or DP port, please adjust resolution to the optimal state: 1920 x 1080 @ 60Hz from your PC.
- 2. The factory default setting HDMI supports to the resolution 1920 x 1080 @ 60Hz.
- 3. The USB hub default setting of USB C input for this monitor is "High Data Speed". The maximum resolution supported depends on your graphic card capability. If your PC doesn't support HBR 3, select "High Resolution" in USB Setting, then the maximum resolution supported will be 1920 x 1080 @75Hz. Press button > USB Setting > USB > High Resolution

#### 9. Power Management

If you have VESA DPM compliance display card or software installed in your PC, the display can automatically reduce its power consumption when not in use. If an input from a keyboard, mouse or other input device is detected, the display will 'wake up' automatically. The following table shows the power consumption and signaling of this automatic power saving feature:

Power Management Definition					
VESA Mode	Video	H-sync	V-sync	Power Used	LED Color
Active	ON	Yes	Yes	22.8 W (typ.) 173.0 W (max.)	White
Sleep (Standby mode)	OFF	No	No	0.3 W (typ.)	White (blink)
Off mode (AC switch)	OFF	-	-	0W (AC switch)	OFF

The following setup is used to measure power consumption on this display.

Native resolution: 1920 x 1080

Contrast: 50%Brightness: 50%

Color temperature: 6500k with full white pattern

• Audio and USB Inactive (Off)

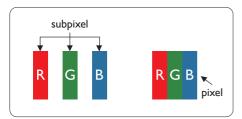

Note

This data is subject to change without notice.

# Customer care and warranty

### 10.1 Philips' Flat Panel Displays Pixel Defect Policy

Philips strives to deliver the highest quality products. We use some of the industry's most advanced manufacturing processes and practice stringent quality control. However, pixel or sub pixel defects on the TFT Display panels used in flat panel displays are sometimes unavoidable. No manufacturer can guarantee that all panels will be free from pixel defects, but Philips guarantees that any display with an unacceptable number of defects will be repaired or replaced under warranty. This notice explains the different types of pixel defects and defines acceptable defect levels for each type. In order to qualify for repair or replacement under warranty, the number of pixel defects on a TFT Display panel must exceed these acceptable levels. For example, no more than 0.0004% of the subpixels on a display may be defective. Furthermore, Philips sets even higher quality standards for certain types or combinations of pixel defects that are more noticeable than others. This policy is valid worldwide

#### Pixels and Sub pixels

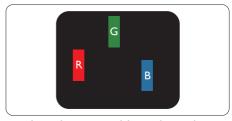

A pixel, or picture element, is composed of three sub pixels in the primary colors of red, green and blue. Many pixels together form an image. When all sub pixels of a pixel are lit, the three colored sub pixels together appear as a single white pixel. When all are dark, the three colored sub pixels together appear as a single black pixel. Other combinations of lit and dark sub pixels appear as single pixels of other colors.

#### Types of Pixel Defects

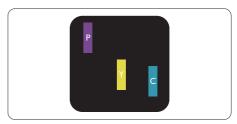

Pixel and sub pixel defects appear on the screen in different ways. There are two categories of pixel defects and several types of sub pixel defects within each category.

#### **Bright Dot Defects**

Bright dot defects appear as pixels or sub pixels that are always lit or 'on'. That is, a bright dot is a sub-pixel that stands out on the screen when the display displays a dark pattern. There are the types of bright dot defects.

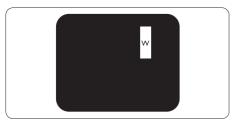

One lit red, green or blue sub pixel.

Two adjacent lit sub pixels:

- Red + Blue = Purple
- Red + Green = Yellow
- Green + Blue = Cyan (Light Blue)

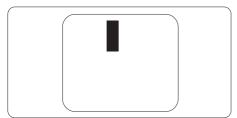

Three adjacent lit sub pixels (one white pixel).

#### Note

A red or blue bright dot must be more than 50 percent brighter than neighboring dots while a green bright dot is 30 percent brighter than neighboring dots.

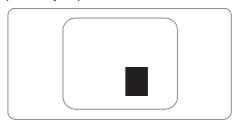

#### **Black Dot Defects**

Black dot defects appear as pixels or sub pixels that are always dark or 'off'. That is, a dark dot is a sub-pixel that stands out on the screen when the display displays a light pattern. These are the types of black dot defects.

#### **Proximity of Pixel Defects**

Because pixel and sub pixels defects of the same type that are near to one another may be more noticeable, Philips also specifies tolerances for the proximity of pixel defects.

#### **Pixel Defect Tolerances**

In order to qualify for repair or replacement due to pixel defects during the warranty period, a TFT Display panel in a Philips flat panel display must have pixel or sub pixel defects exceeding the tolerances listed in the following tables.

BRIGHT DOT DEFECTS	ACCEPTABLE LEVEL
1 lit subpixel	2
2 adjacent lit subpixels	1
3 adjacent lit subpixels (one white pixel)	0
Distance between two bright dot defects*	>15mm
Total bright dot defects of all types	2
BLACK DOT DEFECTS	ACCEPTABLE LEVEL
1 dark subpixel	3 or fewer
2 adjacent dark subpixels	2 or fewer
3 adjacent dark subpixels	0
Distance between two black dot defects*	>15mm
Total black dot defects of all types	3 or fewer
TOTAL DOT DEFECTS	ACCEPTABLE LEVEL
Total bright or black dot defects of all types	5 or fewer

1 or 2 adjacent sub pixel defects = 1 dot defect

#### 10.2 Customer Care & Warranty

For warranty coverage information and additional support requirements valid for your region, please visit www.philips.com/support website for details or contact your local Philips Customer Care Center.

For Warranty Period please refer to Warranty Statement in Important Information Manual.

For extended warranty, if you would like to extend your general warranty period, an Out of Warranty service package is offered via our Certified Service Center.

If you wish to make use of this service, please be sure to purchase the service within 30 calendar days of your original purchase date. During the extended warranty period, the service includes pickup, repair and return service, however the user will be responsible for all costs accrued.

If the Certified Service Partner cannot perform the required repairs under the offered extended warranty package, we will find alternative solutions for you, if possible, up to the extended warranty period you have purchased.

Please contact our Philips Customer Service Representative or local contact center (by Consumer care number) for more details.

Philips Customer Care Center number listed below.

•	Local Standard Warranty Period	•	Extended Warranty Period	•	Total Warranty Period
•	Depend on different Regions	•	+ 1 Year	•	Local Standard warranty period +1
		•	+ 2 Years	•	Local Standard warranty period +2
		•	+ 3 Years	•	Local Standard warranty period +3

<sup>\*\*</sup>Proof of original purchase and extended warranty purchase required.

Please refer to important information manual for regional service hotline, which is available on the Philips website support page.

# Troubleshooting & FAOs

#### 11.1 Troubleshooting

This page deals with problems that can be corrected by a user. If the problem still persists after you have tried these solutions, contact Philips customer service representative.

#### 1 Common Problems

#### No Picture (Power LED not lit)

- Make sure the power cord is plugged into the power outlet and into the back of the display.
- First, ensure that the power button on the front of the display is in the OFF position, then press it to the ON position.

#### No Picture (Power LED is White)

- Make sure the computer is turned on.
- Make sure the signal cable is properly connected to your computer.
- Make sure the display cable has no bent pins on the connect side. If yes, repair or replace the cable.
- The Energy Saving feature may be activated

#### Screen says

Check cable connection

 Make sure the display cable is properly connected to your computer. (Also refer to the Quick Start Guide).

- Check to see if the display cable has bent pins.
- Make sure the computer is turned on

#### Visible signs of smoke or sparks

- Do not perform any troubleshooting steps
- Disconnect the display from mains power source immediately for safety
- Contact with Philips customer service representative immediately.

#### 2 Imaging Problems

Image appears blurred, indistinct or too dark

 Adjust the contrast and brightness on On-Screen Display.

An "after-image", "burn-in" or "ghost image" remains after the power has been turned off.

- Uninterrupted display of still or static images over an extended period may cause "burn in", also known as "after-imaging " or "ghost imaging", on your screen. "Burn-in", "after-imaging", or "ghost imaging" is a well-known phenomenon in LCD panel technology. In most cases, the "Burn-in" or "after-imaging" or "ghost imaging" will disappear gradually over a period of time after the power has been switched off.
- Always activate a moving screen saver program when you leave your display unattended.
- Always activate a periodic screen refresh application if your LCD display will display unchanging static content.
- Failure to activate a screen saver, or a periodic screen refresh application may result in severe "burn-in" or

"after-image" or "ghost image" symptoms that will not disappear and cannot be repaired. The damage mentioned above is not covered under your warranty.

Image appears distorted. Text is fuzzy or blurred.

 Set the PC's display resolution to the same mode as display's recommended screen native resolution.

Green, red, blue, dark, and white dots appears on the screen

- The remaining dots are normal characteristic of the liquid crystal used in today's technology, Please refer the pixel policy for more detail.
- \* The "power on" light is too strong and is disturbing
- You can adjust "power on" light using the power LED Setup in OSD main Controls.

For further assistance, refer to the Service contact information listed in Important information manual and contact Philips customer service representative.

\* Functionality different according to display.

#### 11.2 General FAQs

Q1: When I install my display what should I do if the screen shows 'Cannot display this video mode'?

Ans.: Recommended resolution for this display: 1920 x 1080.

- Unplug all cables, then connect your PC to the display that you used previously.
- In the Windows Start Menu, select Settings/Control Panel. In the Control Panel Window, select the Display icon. Inside the Display Control Panel, select the 'Settings' tab. Under the setting tab, in box labelled 'desktop area', move the sidebar to 1920 x 1080 pixels.
- Open 'Advanced Properties' and set the Refresh Rate to 60 Hz, then click OK.
- Restart your computer and repeat step 2 and 3 to verify that your PC is set at 1920 x 1080.
- Shut down your computer, disconnect your old display and reconnect your Philips LCD display.
- Turn on your display and then turn on your PC.

Q2: What is the recommended refresh rate for LCD display?

Ans.: Recommended refresh rate in LCD displays is 60 Hz, In case of any disturbance on screen, you can set it up to 75 Hz to see if that removes the disturbance.

Q3: What are the .inf and .icm files? How do I install the drivers (.inf and .icm)?

Ans.: These are the driver files for your monitor. Your computer may ask you for monitor drivers (.inf

and .icm files) when you first install your monitor. Follow the instructions in your user manual, monitor drivers (.inf and .icm files) will be installed automatically.

Q4: How do I adjust the resolution?

Ans.: Your video card/graphic driver and display together determine the available resolutions. You can select the desired resolution under Windows\* Control Panel with the "Display properties".

Q5: What if I get lost when I am making display adjustments via OSD?

Q6: Is the LCD screen resistant to scratches?

Ans.: In general it is recommended that the panel surface is not subjected to excessive shocks and is protected from sharp or blunt objects. When handling the display, make sure that there is no pressure or force applied to the panel surface side. This may affect your warranty conditions.

Q7: How should I clean the LCD surface?

Ans.: For normal cleaning, use a clean, soft cloth. For extensive cleaning, please use isopropyl alcohol. Do not use other solvents such as ethyl alcohol, ethanol, acetone, hexane, etc.

Q8: Can I change the color setting of my display?

Ans.: Yes, you can change your color setting through OSD control as the following procedures,

- Press "OK" to show the OSD (On Screen Display) menu
- Press "Down Arrow" to select the option "Color" then press "OK" to enter color setting, there are three settings as below.
  - 1. Color Temperature: Native, 5000K, 6500K, 7500K, 8200K, 9300K and 11500K. With settings in the 5000K range the panel appears "warm, with a red-white color tone", while a 11500K temperature yields "cool, bluewhite toning".
  - sRGB: This is a standard setting for ensuring correct exchange of colors between different device (e.g. digital cameras, displays, printers, scanners, etc).
  - User Define: The user can choose his/her preference color setting by adjusting red, green, blue color.

#### Note

A measurement of the color of light radiated by an object while it is being heated. This measurement is expressed in terms of absolute scale, (degrees Kelvin). Lower Kevin temperatures such as 2004K are red; higher temperatures such as 9300K are blue. Neutral temperature is white, at 6504K.

Q9: Can I connect my LCD display to any PC, workstation or Mac?

Ans.: Yes. All Philips LCD displays are fully compatible with standard PCs, Macs and workstations.
You may need a cable adapter

to connect the display to your Mac system. Please contact your Philips sales representative for more information.

Q10: Are Philips LCD displays Plug-and-Play?

Ans.: Yes, the displays are Plug-and-Play compatible with Windows 11/10/8.1/8/7

Q11: What is Image Sticking, or Image Burn-in, or After Image, or Ghost Image in LCD panels?

Ans.: Uninterrupted display of still or static images over an extended period may cause "burn in", also known as "after-imaging" or "ghost imaging", on your screen. "Burn-in", "after-imaging", or "ghost imaging" is a well-known phenomenon in LCD panel technology. In most cases, the "Burn-in" or "after-imaging" or "ghost imaging" will disappear gradually over a period of time after the power has been switched off.

Always activate a moving screen saver program when you leave your display unattended.
Always activate a periodic screen refresh application if your LCD display will display unchanging static content.

#### Warning

Failure to activate a screen saver, or a periodic screen refresh application may result in severe "burn-in" or "afterimage" or "ghost image" symptoms that will not disappear and cannot be repaired. The damage mentioned above is not covered under your warranty.

Q12: Why is my Display not showing sharp text, and is displaying jagged characters?

Ans.: Your LCD display works best at its native resolution of 1920 x 1080. For best display, please use this resolution.

Q13: How to unlock/lock my hot key?

Ans.: To lock the OSD, press and hold the /OK button while the monitor is off and then press button to turn the monitor on. To un-lock the OSD, press and hold the /OK button while the monitor is off and then press button to turn the monitor on.

Q14: Where can I find Important Information manual mentioned in FDFU?

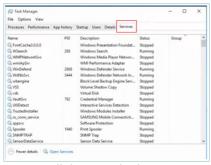

Ans.: Important Information manual can be download on the Philips website support page."

Q15: Why cannot detect my monitor's Windows Hello webcam, and also Face Recognition option is greyed out?

Ans: To fix this issue, you need to proceed following steps to detect the webcam device again:

 Press Crtl + Shift + ESC to launch the Microsoft Windows Task Manager.

2. Select 'Services' tag.

3.Scroll down and select 'WbioSrvc' (Windows Biometric Service). If the status shows 'Running', right click to stop the service first, then restart the service manually.

 Then go back to sign-in options menu to set up Window Hello Webcam.

Q16: Why I cannot automatically switch to the connected input source after daisy chain over USB-C?

Ans: It's because your primary monitor connects to more than one input source at the same time. When you use the primary monitor to the notebook with USB-C, and also daisy chain to the secondary monitor.

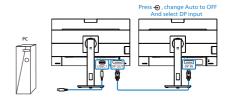

Once the notebook goes into standby mode, if you want to show the content from HDMI or DisplayPort, please press ⊕ to change the signal input source.

Q17: What can I do if there is no signal on my monitors when daisychaining them together?

Ans: There are two ways to try to resolve the no signal issue:

1) On the monitor with the DisplayPort Signal output, press the OSD (On-Screen Display) menu button. Select Input

and change Auto to OFF and then select DP (DisplayPort) input. This will allow the signal to pass through to the next monitor. Both monitors should begin displaying properly. 2) Disconnect the video cable between the first and second monitor, then connect the second monitor directly to the computer. On the second monitor press the OSD menu button, select Input, change Auto to OFF, and select DP input. Reconnect the first and second monitors to the computer and the daisy chain function will be enabled.

#### 11.3 Multiview FAQs

Q1: Can I enlarge the PIP sub window?

Ans.: Yes, there are 3 sizes to select: [Small], [Middle], [Large]. You can press (a) to enter OSD menu. Select your preferred [PIP Size] option from the [PIP / PBP] main menu.

Q2: How to listen to Audio, independent of video?

Ans.: Normally the audio source is linked to the main picture source. If you want to change audio-source input , you can press 
to enter OSD menu. Select your preferred [Audio Source] option from the [Audio] main menu.

Please note that the next time you turn on your display, the display will by default select the audio source you chose last time. In case you want to change it again, you need to go through the above steps to select your new preferred audio source, which then will become the "default" mode.

Q3: Why the sub-windows flickers when I enable PIP/PBP.

Ans: It's because the sub-windows video source is interlace timing (i-timing), please change sub-window signal source to be progressive timing (P-timing).
