

The Philips logo is located in the top left corner of the image. It consists of the word "PHILIPS" in a bold, blue, sans-serif font, with a thin blue horizontal bar extending from the right side of the letters.A close-up photograph of two healthcare professionals, a man and a woman, looking down at a tablet device. The man is on the left, wearing a blue scrub top, and the woman is on the right, wearing a white lab coat over a blue scrub top. They are both smiling and appear to be reviewing patient data on the screen. The background is a blurred hospital or clinic setting.

Philips HealthSuite Patient Monitoring Platform

An enterprise-level suite of applications, insights and workflow

Introducing the Philips HealthSuite Patient Monitoring Platform (HSPMP) – interoperability at scale

As patient acuities increase and critical care capacity is stretched, flexibility and agility will be vital for many health systems and IDNs. There is a clear need for technology that allows for scalable interoperability, automation, data continuity, and access regardless of location.

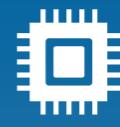

At Philips, we're moving to an open patient monitoring ecosystem, where clinicians are free to use virtually any device and wearables of their choice. The **HealthSuite Patient Monitoring Platform** will offer you the flexibility to monitor patients before, during and after hospitalization for a unified and seamless patient view.

Key benefits at a glance

A platform that can be deployed on-premises and/or as a cloud enabled informatics platform

Uses vendor-neutral data and the latest interoperability standards (such as IHE, HL7 and SDC in future)

Supports simplified clinical workflows and IT management

Provides shared security controls and policies while helping accelerate turnaround time for delivering security patches

Enabled by live data flowing freely from virtually any medical device manufacturer, across acuities*

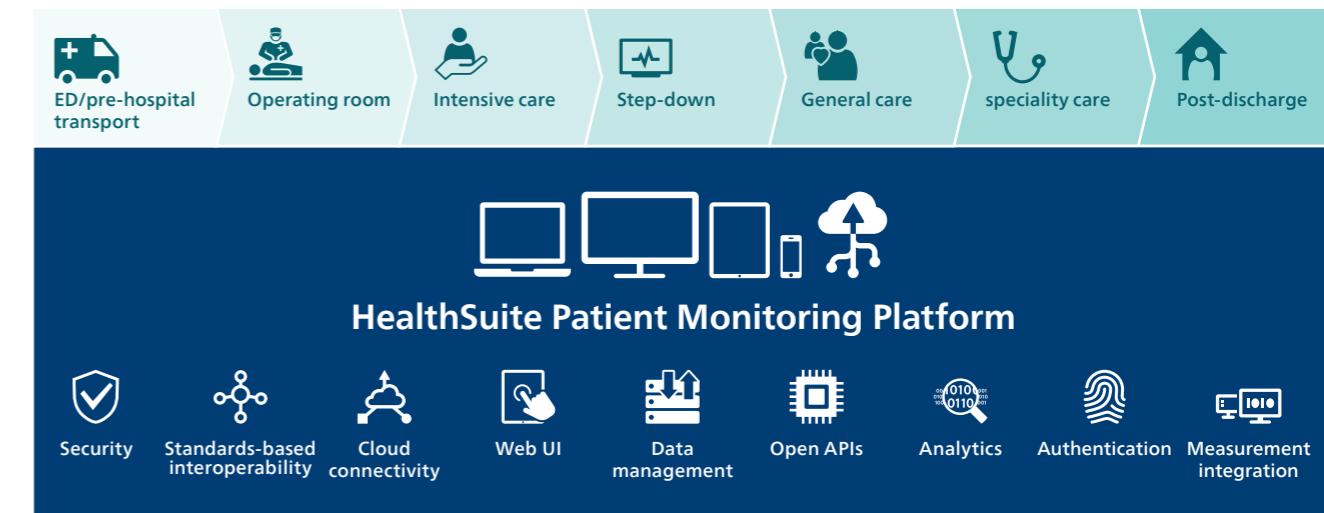

Enabled to extend connectivity for monitoring patients and specific locations post-discharge

* MDIP capability

Our vision: to build a 360-degree view of the patient

The HealthSuite Patient Monitoring Platform can help your health system or IDN to maximize your potential today, while creating the necessary foundations to be ready as care models and technology continue to evolve.

What's included in the first release of the HealthSuite Patient Monitoring Platform?

The initial release of the HSPMP is designed to create truly 360-degree visibility into your patients – whether they are being monitored using Philips or third-party products.

- Device-agnostic total patient view, with mapping of third-party data from the Philips Medical Device Information Platform (MDIP) to the Patient Information Center iX (PIC iX)
- Provides scalability, to help map live data for more than 100 beds
- Single view of device data from the point of care, regardless of touchpoint*
- Distribute numerics, enumerations and alarms to Care Assist and HL7, out to your EMR and other downstream systems*
- Foundation for continuous updates with minimal downtime, and for cloud-enabled platform components to ease implementation for future innovations using the platform

* Capability with Patient Information Center iX

How can the HealthSuite Patient Monitoring Platform benefit you?

Operational/technical stakeholders

- Help supports time to adjust to capacity and scale
- Enables remote deployment of software updates and servicing across the enterprise
- Help support time for new installation and extension into new care areas
- Work with a common infrastructure and microservices-based architecture designed for rapid scaling of new capabilities and flexible capacity

Financial stakeholders

- Optimize predictability of spend and operational expenses budgeting
- Leverage your existing infrastructure with a cloud-enabled platform – a single data pathway reducing touchpoints, failures and overall footprint
- Create foundations for securing and scaling the deployment of both updates and future innovations

The HealthSuite Patient Monitoring Platform

Part of the Philips vision for healthcare

At Philips, we're moving towards a patient monitoring ecosystem that helps open data pathways across the hospital enterprise, using real-time vendor-neutral monitoring data across patient care areas, through discharge and follow-up. This cloud-enabled solution will deliver a suite of services that will enable you to host applications, and to utilize powerful analytics and insights for clinical decision making – all while ensuring patient data remains secure and protected.

The **HealthSuite Patient Monitoring Platform** is designed to help you establish a foundation for this open ecosystem in the future.

Talk to your local sales representative to find out more about how the platform could help you and your health system or IDN – today and tomorrow.
