Hospital Patient Monitoring

Focal Point

Simplify your operations, amplify efficiency

With Philips PerformanceBridge Focal Point

Real-time insights for optimized operations

Are you struggling to manage multiple, complex systems across your healthcare facility? Do you often find yourself reacting to issues rather than proactively preventing them before they become an issue? Do limited time and resources make it difficult to monitor and maintain all your equipment effectively? Is keeping up with the latest security patches and updates a challenge? You're not alone.

Biomedical engineers and IT personnel across hospitals globally are facing increasing demands to maintain complex healthcare systems while ensuring patient safety and minimizing downtime. Philips Focal Point is designed to address these challenges head-on, providing the insights and tools necessary to manage and optimize healthcare systems effectively.

From real-time monitoring to strategic business analytics, Focal Point empowers your team to make informed decisions that can enhance system health and drive efficiency.

Focal Point delivers:

Visibility into your Philips product inventory: Track and manage your devices effectively.

Security and performance monitoring: Ensure your Philips products are secure and performing optimally.

Proactive alerts: Receive notification of critical issues before they affect operations.
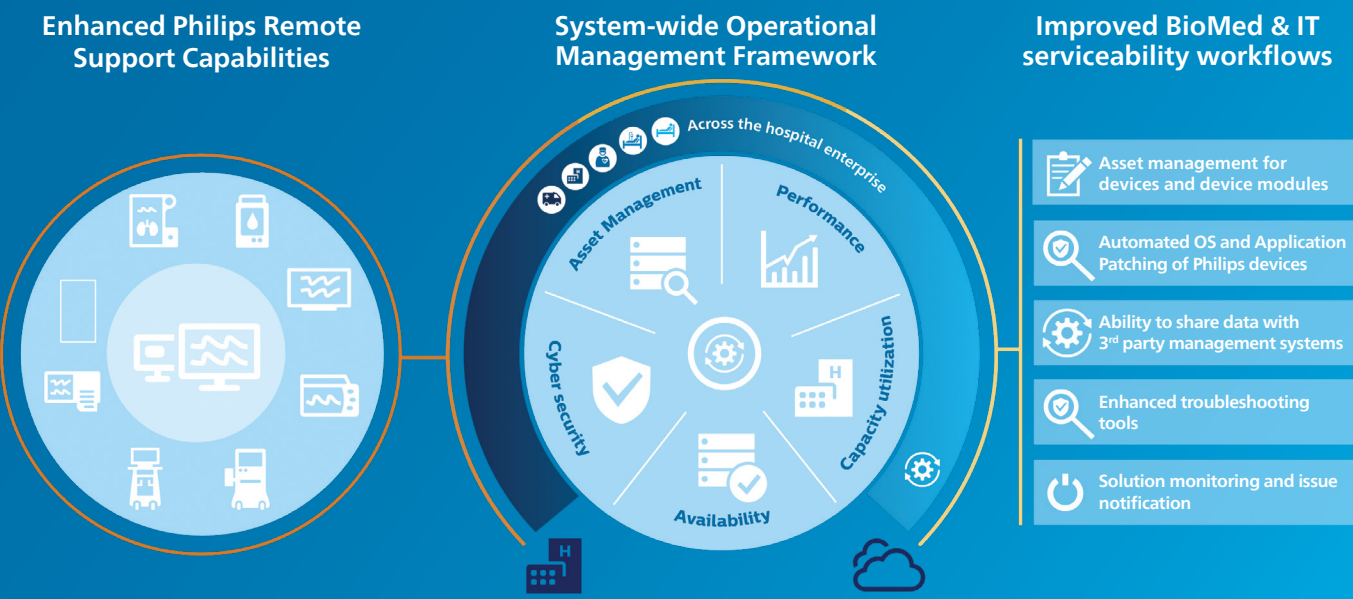

Simplified security patch management: Manage the complexity of applying security patches to Philips products.

Up-to-date Philips software: Ensure your systems are protected with the latest security patches.

Central management of battery health: Monitor and manage the battery health of your Philips devices.

Enhanced Philips Remote Support Capabilities

System-wide Operational Management Framework

Across the hospital enterprise

Availability

Improved BioMed & IT serviceability workflows

- Asset management for devices and device modules
- Automated OS and Application Patching of Philips devices
- Ability to share data with 3rd party management systems
- Enhanced troubleshooting tools
- Solution monitoring and issue notification

Take control of your Philips products with centralized management

Focal Point offers centralized operational management of your Philips products, giving you complete visibility into your inventory, security, status, and performance. No more juggling multiple systems or manually tracking device status – Focal Point puts everything you need in one place.

Stay ahead with real-time alerts and key performance indicators that allow you to monitor and enhance Philips product performance efficiently, reducing the burden on your team and lowering operational expenditure.
Achieve seamless integration with your existing systems

Managing different systems in a multi-vendor environment can be a significant challenge. Focal Point integrates seamlessly with leading third-party operational management software, providing a unified view across all your devices.

This cross-vendor capability ensures that detailed Philips product information is incorporated into your existing systems, simplifying management and enhancing operational efficiency.
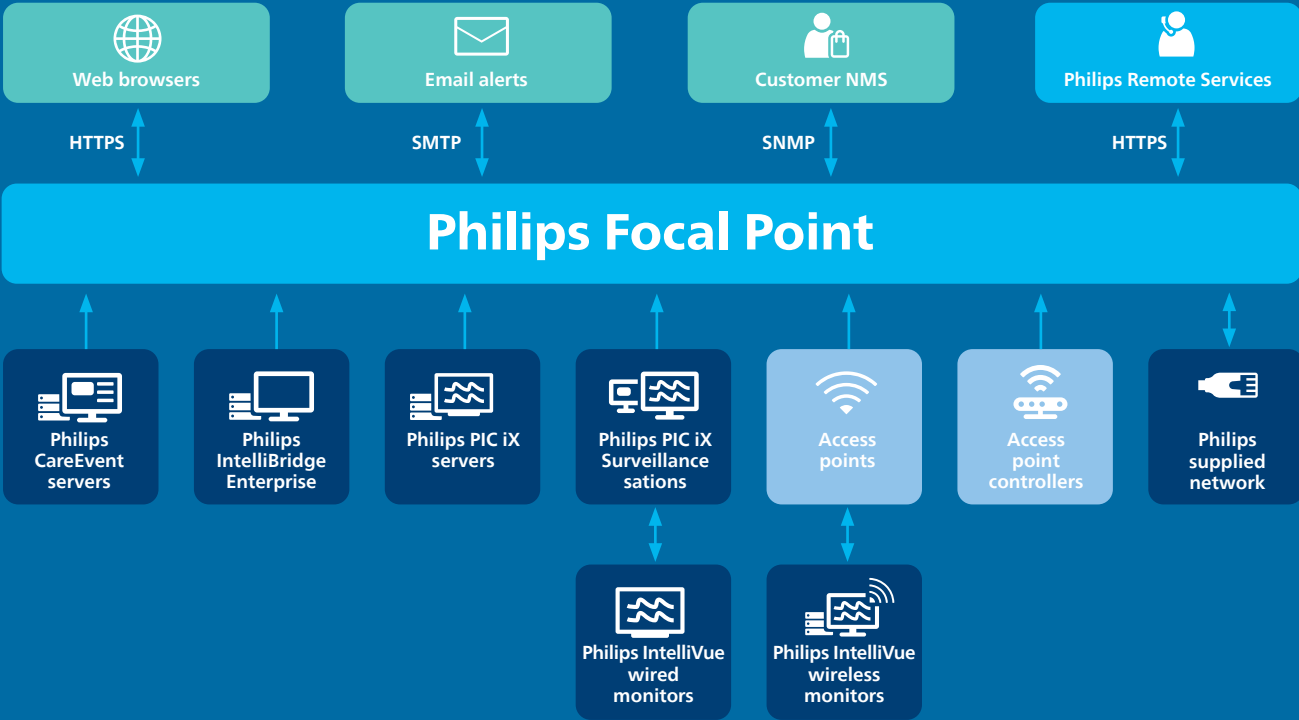

Cross-vendor monitoring: Integrate Philips product data into your existing systems.

Detailed Philips product information: Centralize and manage data from multiple vendors.

Simplify security management and protect your systems

Managing the security of healthcare technology is increasingly complex and time-consuming. Focal Point simplifies this process by providing an easy way to manage and apply security patches to Philips products. By keeping your software up to date, you can protect your network, maintain compliance, and ensure the integrity of your operations, all without overwhelming your team with manual updates.

- Philips IntelliVue wired monitors
- Philips IntelliVue wireless monitors

Proactive security starts with Philips Focal Point OS Patching

- Proactive security
- Central patch management for your Philips central stations
- Microsoft Windows patches when and where you need them
- Self-support, assisted, or full-service options
- Frees up your resources
- Reduces time to deploy OS patches

Protecting valuable assets and data integrity from outside attack has always been a high priority in IT. This is particularly true in healthcare. In the light of security incidents such as Wannacry, strengthening defenses and responding quickly and proactively to potential threats have never been more important.

Philips Focal Point OS Patching offers a controlled, semi-automated way to roll out the latest security patches across your organization for the Microsoft™ operating system of our Philips PIC iX platform, IBE and Focal Point itself. Thanks to central management of OS patches, you no longer need to worry about manually identifying and installing relevant fixes and keeping patches up to date. Offered as a self-supported, assisted or fully managed service, Philips Focal Point OS Patching provides access to security patches when and where you need them.

Simplified and automated process
Philips Focal Point OS Patching provides a constant overview of the OS critical patches validated by Philips and makes these readily accessible, simplifying workflows. This helps protect your PIC iX, IBE, and Focal Point itself from cyber attacks and provides peace of mind. In addition, you benefit from decades of our experience in maintaining Philips patient monitoring solutions.

Visibility and control
Coordinated change management with hospital IT and biomed staff limits system downtime and delivers scheduled support for OS patch application. Centralized monitoring and management plus audits and reports deliver better visibility into which of your PIC iX systems, IBE, and Focal Point itself need patches.

Access additional patching support if you need it
Alongside our self-supported Focal Point OS Patching offering, we also offer you the option to upgrade to a managed services package where our specialists will perform all OS patching updates on your behalf.

Please talk to your Philips representative to learn more about Philips Focal Point OS Patching.

To learn more about Philips Focal Point and our broader portfolio of remote enablement solutions, please contact your local Philips Sales representative.

We are always interested in engaging with you.
