Patient Monitor

IntelliVue X3

Monitoring on the move

Philips Patient Monitor — IntelliVue X3 integrates smoothly with the Philips IntelliVue family of bedside monitors, central stations, and mobile applications.

Are you looking to simplify the process of moving your critical patients from one area of the hospital to another? The Philips Patient Monitor — IntelliVue X3 is a compact, highly portable, dual-purpose patient monitor that instantly transforms from a multi-measurement bedside module into a rugged, fully functional transport monitor. There is no need to change patient cables before the move or when you return to the bedside, so you can spend less time dealing with equipment and have more time to focus on what matters — your patients. This battery-powered, next-generation system features today's intuitive smartphone-like operation for proven ease-of-use and a familiar user experience. It incorporates durable and easy-to-clean materials designed to withstand harsh chemicals used in many infection-control cleaning protocols. And it offers a scalable set of basic and advanced clinical measurements you can easily tailor to each patient and acuity level.

Stay connected your way. Use your existing wireless network (802.11) or the IntelliVue Smart-Hopping system¹ to connect X3 monitors to the Philips Patient Information Center iX (PIC iX) then to your EMR.

Close the gap in patient data

Gaps in medical information during patient transport can lead to delayed treatment, inefficient workflow and possibly impact the quality of care. The X3 is designed for uninterrupted patient monitoring – at the bedside and during transport. It can connect wirelessly to your IntelliVue central stations, then onto the EMR across all levels of hospital care. With X3, everyone who needs timely access to patient data has it – to help make fast, informed clinical decisions and close the gap in patient documentation.

A proven interface⁵. Philips is committed to developing products that are simple to learn and easy to use. And the X3 monitor is no exception. Its intuitive user interface builds on our market-leading IntelliVue patient monitors that have been validated and continually improved over years of clinical use.

Designed to improve efficiency

The X3 helps to streamline workflow and can help boost staff efficiency by reducing the number of steps it takes to prepare patients for transport. When connected to an IntelliVue bedside monitor, the X3 acts as a multi-measurement module. It provides a scalable set of measurements including up to 12-leads of diagnostic ECG with industry-leading ST/AR arrhythmia, ST and QT analysis, accelerated NBP, your choice of SpO₂ technology, CO₂, and dual invasive pressures.

Once you detach from the host monitor, the X3 turns into a compact, highly robust transport monitor, delivering patient vital signs, waveforms, and alarms to its high-resolution display. There is no need to change patient cables before or after transport.

Easy to use

With its brilliant 15.5cm (6.1 inch) graphical display and modern, multi-touch technology, the X3 is as simple to operate as your smartphone. It's ease-of-use has been validated against accepted usability engineering guidelines by an independent human factors laboratory. Simply swipe the display to browse through a broad selection of screens tailored to various clinical situations. Each screen can be customized to present exactly what you want to see, the way you want to see it. And, when space is limited, simply turn the monitor to automatically change the orientation from landscape to portrait.

Built to last

Hospitals can be hectic, stressful environments, and moving patients without damaging transport monitors can be a real challenge. The X3 is a rugged device designed to withstand the bumps, bounces, and everyday rigors of transport monitoring. It has been tested to survive drops from up to 1 meter (3.3 feet), so if it falls, it can absorb the impact.

Its medical-grade display features Antimicrobial Corning® Gorilla® Glass which is not only chemically strengthened — its atomic configuration is formulated so that the glass is tougher and more durable compared to competitive cover glass materials. Specifically developed transport mountings secure the monitor and provide easy caregiver access during in-hospital patient transport. A sturdy handle, in a variety of color options, makes the X3 comfortable to carry and easy to identify, while protecting both the display and measurement connectors.

See the big picture

It is critically important to see your patient's vital signs at a glance. IntelliVue XDS Remote Display software makes it simple to display measurements on a standard, high-resolution, large display.

Support for infection control

The X3 supports your infection control goals right from the start. All surfaces are built from chemically-resistant materials, including the Antimicrobial Corning® Gorilla® Glass display. They are designed to withstand many cleaning agents², so you can confidently use aggressive disinfectants on the display and housing.

The part of the X3 you touch most often – its touchscreen display – is covered with Antimicrobial Corning® Gorilla® Glass³, embedded with an ionic silver with antimicrobial properties.

A history of reliability

With more than 1 million IntelliVue patient monitors sold since 2002, the X3 is part of a family of monitoring solutions with a proven track record for quality. If it does need service, accepted design guidelines have been followed to allow easy serviceability. A highly-modular structure and innovative slide-out drawer design make all the components easy to access, remove, and replace – quickly and inexpensively.

Protect your investment

The X3 integrates easily with your existing IntelliVue patient monitoring solution by providing a common interface across every department and level of care to facilitate training. It works with your existing IntelliVue measurement extensions, host monitors, Patient Information Center (Classic and PIC iX), your clinical network infrastructure, and other components.⁴ This can help to extend the lifecycle of your monitoring solutions and reduce the total cost of ownership over time.

Discover how Philips Medical Supplies can support your focus on what matters most. Go to www.philips.com/supplies to find supplies you need and to get in touch with your sales representative.

- ¹ Not available in all geographies.
- ² Even against very aggressive disinfectants, X3's housing materials have shown to resist deterioration up to 60 times longer than its predecessor. See the IntelliVue X3 Instructions for Use for a complete list of recommended agents.
- ³ Antimicrobial Corning Gorilla Glass does not protect users or provide any direct or implied health-benefit. Corning and Gorilla are registered trademarks of Corning Incorporated.
- ⁴ Backwards compatibility varies with IntelliVue patient monitoring hardware and Patient Information Center hardware (both may require software upgrade). See your Philips representative for compatibility list.
